ACKNOWLEDGMENTS

The *County and City Data Book* was prepared under the direction of Edwin D. Goldfield, Chief, Statistical Reports Division. William Lerner, Assistant Chief, was responsible for general supervision, planning of content, and review. Helen E. Teir was responsible for compilation, assisted by Richard R. Parham for coordination of procedures and technical supervision, and Alma L. Butler for editing and clerical operations.

In the Systems Division, under the general direction of Sol Dolleck, Chief, C. Hing Lee was responsible for planning computer programing, Thomas C. DiNenna for programing the selection of data from tapes and the high-speed printer output, and Linda E. David and John A. Beall for planning and preparation of punchcards and tabulations.

The cooperation of the many other individuals who participated in the preparation of this volume is gratefully acknowledged. The source citations identify the various government and private agencies which contributed information and assistance.

CENSUS REGIONS AND GEOGRAPHIC DIVISIONS OF THE UNITED STATES

U.S. DEPARTMENT OF COMMERCE
BUREAU OF THE CENSUS

INTRODUCTION

This volume is the seventh in the *County and City Data Book* series. It presents a variety of statistical information for counties, standard metropolitan statistical areas, and cities. For each county or county equivalent, 144 statistical items are presented. Comparable totals are shown for States, divisions, regions, and the United States. For each standard metropolitan statistical area, a corresponding selection of items is given, except that data on mineral industries and agriculture are omitted. For each incorporated city with 25,000 inhabitants or more in 1960, 148 items are presented.

Descriptive text and source notes are included to help the user interpret the figures shown. The publications cited as sources usually contain additional statistical detail and more comprehensive definitions and concepts than can be presented here.

Selection of data.—In general, the items selected are those for which the statistics represent generally useful summary measures, and are available in comparable form for all counties or for all cities.

Most of the statistics in this volume were derived from the latest censuses of population, housing, governments, manufactures, business, mineral industries, and agriculture. In addition, this book includes statistics from the following governmental and private agencies: Board of Governors of the Federal Reserve System, Bureau of Family Services, Civil Service Commission, Federal Home Loan Bank Board, Federal Power Commission, Public Health Service, Weather Bureau, American Hospital Association, and Governmental Affairs Institute.

Arrangement of tables.—Table 1 is a summary table, presenting totals for the United States, for each geographic region and division, and for each State. These totals cover the same 144 items of information that are presented for each county in table 2. Table 3 includes, for standard metropolitan statistical areas (SMSA's), 113 items of information corresponding to the first 113 items presented for counties. Table 4 presents 148 items for each city having 25,000 inhabitants or more in 1960. (See "Column Headings," pp. iv–vii.)

To facilitate finding of statistics and comparisons among types of areas, each table shows as many of the same items as possible, in the same sequence. The differences in content among the tables are primarily due to the fact that some of the data are not available for some of the areas covered or are not applicable to all areas. For example, data for mineral industries and agriculture, shown for counties, are not applicable to cities; climate data, shown for cities, are not available for counties and standard metropolitan statistical areas. The greater importance of particular items for one type of area as against others also accounts for some differences in content.

Each item is identified by a number. The items in tables 1 and 2 are numbered 1 to 144; those in table 3, 1 to 113; and those in table 4, which has a different format, are numbered 201 to 348. The numbers are used not only as a finding device but also to identify the applicable portions of the text material appearing under "Source Notes and Explanations."

Appendixes.—Several appendixes are included to expand or explain the coverage of the tables.

Appendix A is in two parts. Part 1 presents the population of the cities shown in table 4, with the cities arranged according to rank order of population. Part 2 provides a complete list of all urban places identified in the 1960 Census of Population, arranged alphabetically by State, and shows their population and the county in which located.

Appendix B presents a classification of the units presented as "counties" in table 2 by their official government status. In order to include all of the first-level subdivisions of States, the "county" table includes a number of "independent cities," "Federal areas," "city-counties," and other special cases. These are included also, where appropriate, in the city table.

Appendix C is included because some of the cities in the city table do not have weather stations. To present climatological data for such cities, nearby stations having similar weather conditions were substituted. Appendix C lists cities for which substitutions were made and identifies the weather station substituted.

Appendix D presents data for those places for which the Bureau of the Census has taken special census counts since the 1960 census. Data are for areas of 25,000 or more inhabitants in 1960. The concepts of coverage and the qualifications relating to these data are generally the same as those pertaining to decennial census statistics. Most of the special censuses were taken at the request and expense of the local governments.

Appendix E presents the results of a survey of the sources and types of current population estimates available from State agencies.

Appendix F presents a list of the standard metropolitan statistical areas and standard consolidated areas (see "Geographic Concepts and Codes," p. xiii) together with their constituent counties and independent cities or, in the case of New England SMSA's, their constituent towns and cities.

Maps.—A map for each State appears in the final section of this volume. Each map shows the names and boundaries of all counties and standard metropolitan statistical areas, and the name and location of each city having 25,000 inhabitants or more in 1960.

Two maps appear in the front part of the volume for the United States as a whole. The first shows boundaries of geographic regions, divisions, and States; the second, the name and location of all standard metropolitan statistical areas.

Availability of computer tapes and punchcards.—A computer tape file containing all of the statistics presented in tables 2, 3, and 4 of the *Data Book* is available for sale on one reel of IBM tape at $300 or on two reels of UNIVAC tape at $350. It is not feasible to reproduce selected items of data on computer tapes for appreciably less than the total cost of the entire file because of the additional programing and computer processing that would be required.

Also available are standard IBM 80-column punchcards containing the same data as presented on the tapes and in tables 2, 3, and 4 of the *Data Book*. These punchcards are arranged in 10 major subject matter groups for all counties, 8 major groups for all standard metropolitan statistical areas, and 10 major groups for cities. The items within these groups follow the identical sequence of the column headings shown for each of the tables (see pp. iv–vii). The data contained in each subject matter group are punched into 2 cards. Thus, the data for all subjects are spread over a total of 20 cards for any one county or city, and 16 cards for any one standard metropolitan statistical area.

These cards are available on a cost-of-reproduction basis. The estimated cost of a reproduction of the entire set (approximately 81,000 cards) is $1,000 plus shipping costs. However, it is not necessary to purchase the entire set. Selections can be made of particular items or of specified areas with some reduction in cost, or various fields can be combined into one card from two or more cards at adjusted expense.

Computer tapes and punchcards containing the data presented in the 1952, 1956, and 1962 editions of the *County and City Data Book* are also available on the same basis as for this edition.

For more information concerning cost of punchcards or computer tapes, compatibility of tapes with various computers, or similar matters, write to: Chief, Statistical Reports Division, Bureau of the Census, Washington, D.C. 20233.

Relationship to other Abstract publications.—The annual *Statistical Abstract of the United States* is, of necessity, limited primarily to the presentation of current data for the country as a whole. To a much lesser extent, it presents data for regions, divisions, and States and for historical series. The supplements to the annual *Abstract* have broadened its scope both geographically and historically.

In addition to the *County and City Data Book*, another small-area supplement, *Congressional District Data Book (Districts of the 88th Congress)*, presents for each congressional district a summary of data from recent censuses. This volume, prepared in 1963, has been updated by the issuance of supplementary reports for those States that redistricted for the 89th and 90th Congresses.

The *Directory of Federal Statistics for Local Areas, 1966* is a comprehensive finding guide to sources of Federal statistics for metropolitan areas, counties, urban places, and other local areas.

The *Pocket Data Book, USA 1967* is the first in a biennial series providing graphic and tabular summary data on a wide variety of subjects. It is designed for popular use and quick and easy reference.

The historical supplement currently in circulation is *Historical Statistics of the United States, Colonial Times to 1957*, issued in 1960. Compiled by the Bureau of the Census with the cooperation of the Social Science Research Council, this volume presents historical data on every major aspect of the Nation's social and economic development. *Historical Statistics of the United States—Continuation to 1962 and Revisions*, issued in 1965, carries forward and revises the series in the basic volume that are still current.

Responsibility.—The contents of this volume are taken from a number of sources, as indicated under "Source Notes and Explanations." The Bureau of the Census cannot accept the responsibility for the accuracy or limitations of the data presented here, other than for those which it collects. The responsibility for selection of the material and for proper presentation, however, rests with the Bureau.

Comment and criticism.—In planning revisions of a standard volume, the compiling agency finds it particularly helpful to receive the reactions of the users of each edition. To this end, users of this volume are encouraged to send in their suggestions, comments, and criticisms.

FOR ADDITIONAL INFORMATION ON DATA PRESENTED

write to the agency indicated in the source note in the descriptive text for the given statistical series.

SUGGESTIONS AND COMMENTS

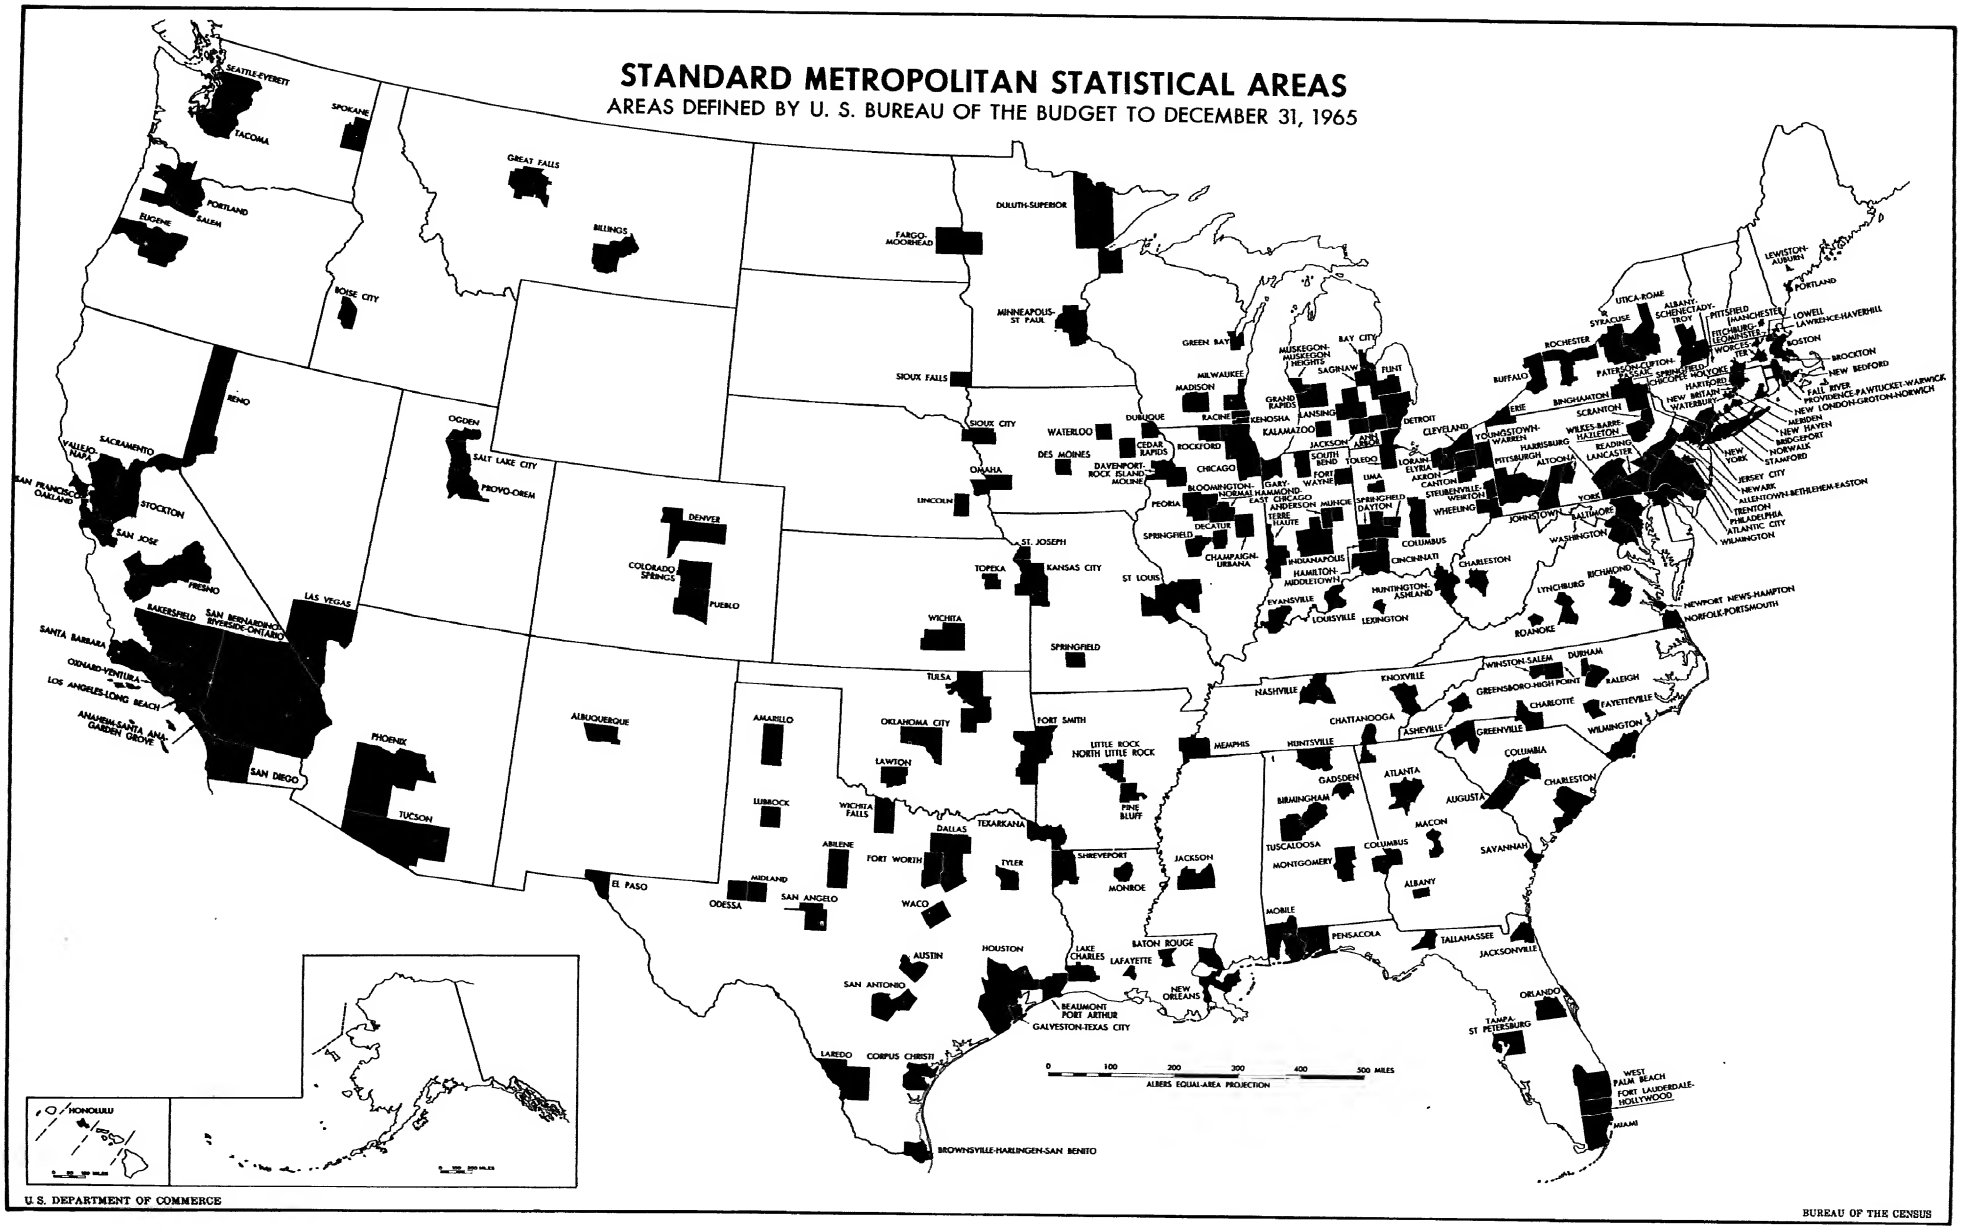
Statistical Abstract Publications

Statistical Abstract of the United States. Since 1878, the authoritative summary of statistics on the social, political, and economic organization of the United States. Includes a representative selection of statistics widely used by public officials, businessmen, educators, librar-

ians, research workers, and students. 1966 issue now available. 1,051 pages, 51 maps and charts. Price $3.75 (clothbound).

Pocket Data Book, USA 1967. Graphic and tabular presentation of summary statistics on a wide variety of subjects. Designed for quick and easy reference. In color, pocket-size, 368 pages, 52 charts. Issued 1967. Price $1.50 (paperbound).

Directory of Federal Statistics for Local Areas, 1966. A comprehensive finding guide to sources of Federal statistics for metropolitan areas, counties, urban places, and other local areas. Specific sources shown for hundreds of items of information on agriculture, banking, business, construction, governments, housing, income, labor, manufactures, mineral industries, population, transportation, and other subjects. 164 pages. Issued 1966. Price $1.00 (paperbound).



Congressional District Data Book (Districts of the 88th Congress) and *Supplements, Redistricted States.* The *Data Book* together with supplements for 7 States that redistricted after the beginning of the 88th Congress presents data for all congressional districts as constituted for the 89th Congress. Includes 254 statistical items for all 435 congressional districts; 113 items pertaining to nonwhite population for selected districts; and 144 items for districts or combinations of districts following county lines. Based largely on results of recent censuses. Includes text, source notes, maps for each State showing congressional district boundaries, and lists of urban places with 10,000 or more inhabitants. Supplements for States that redistricted for the 90th Congress contain data on vote cast, 1954 to 1964, 226 statistical items on population and housing for all districts, 113 items pertaining to the nonwhite population for selected districts, and maps showing the new district boundaries. *Data Book* (clothbound) 603 pages, prepared 1963; *Supplements* (paper) 89th Congress, 1965; 90th Congress, 1966. Price of *Data Book* $4.75. *Supplements* may be obtained on request from the Bureau of the Census.

Historical Statistics of the United States, Colonial Times to 1957. Prepared with the cooperation of the Social Science Research Council. A compilation of more than 8,000 statistical time series, largely annual, on American social and economic development covering periods from 1610 to 1957. Includes definitions of terms and descriptive text. Specific source notes provide a basic guide to original published sources for further reference and additional data. Detailed alphabetical subject index. 801 pages. Issued 1960. Price $6.00 (clothbound).

Historical Statistics of the United States, Colonial Times to 1957: Continuation to 1962 and Revisions. Carries forward the more than 6,000 series in the basic volume that are still current; includes about 300 series that are complements to, or substitutes for, series discontinued since 1956; and presents revisions and corrections for more than 650 series. 158 pages. Issued 1965. Price $1.00 (paperbound).

County and City Data Book, 1962. A compact presentation of 161 items of statistical data for each county in the United States, and 163 items for each of 676 incorporated cities having 25,000 inhabitants or more in 1960. Information comparable to that for counties is also presented for geographic regions and divisions, States, and standard metropolitan statistical areas, with selected data for urbanized areas and unincorporated places. Items included based largely on results of 1960 Censuses of Population and Housing, 1957 Census of Governments, 1958 Censuses of Business, Manufactures, and Mineral Industries, and 1959 Census of Agriculture. Includes 53 maps, explanatory and definitive text, and source notes. 705 pages. Issued 1962. Price $5.25 (clothbound).

Purchase orders should be addressed to the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

BUREAU OF THE CENSUS

GEOGRAPHIC CONCEPTS AND CODES

AREAS FOR WHICH STATISTICS ARE PRESENTED

Regions, divisions, and States.—The geographic groupings of States by regions and divisions as shown in table 1 are the standard groupings used by the Bureau of the Census. Under this arrangement, the United States is first divided into four regions. The regions are divided, in turn, into a total of nine geographic divisions, each of which is composed of a specific group of contiguous States. (See map, p. viii.)

Standard metropolitan statistical areas.—For many types of analysis, the entire area in and around a city, in which the activities form an integrated economic and social system, needs to be considered as a unit. Prior to the 1950 Censuses of Population and Housing, areas of this type had been defined in different ways for different purposes and by various agencies. Leading examples were the metropolitan districts of the 1940 Census of Housing, the industrial areas of the Census of Manufactures, and the labor market areas of the Bureau of Employment Security. To permit all Federal statistical agencies to utilize the same areas for the publication of general-purpose statistics, the Bureau of the Budget has established "standard metropolitan statistical areas" (SMSA's). Every city of 50,000 inhabitants or more according to the 1960 Census of Population or a subsequent special census prior to December 31, 1965, is included in an SMSA.

Since the release of the *County and City Data Book, 1962*, new SMSA's have been established and the definitions of several have been changed. As of December 31, 1965, there were 224 SMSA's in the United States. Data for these are presented in table 3. For definitions and titles, see Appendix F. The definitions and titles are established by the Bureau of the Budget with the advice of the Federal Committee on Standard Metropolitan Statistical Areas. This Committee is composed of representatives of the major statistical agencies of the Federal Government. The criteria used by the Bureau of the Budget in establishing the SMSA's are presented below. (See the Bureau of the Budget publication, *Standard Metropolitan Statistical Areas*, U.S. Government Printing Office, Washington, D.C. 20402, 1964.)

The definition of an individual SMSA involves two considerations. First, a city or cities of specified population to constitute the central city and to identify the county in which it is located as the central county; and second, economic and social relationships with contiguous counties which are metropolitan in character, so that the periphery of the specific metropolitan area may be determined.[1] SMSA's may cross State lines.

Population criteria.—The criteria for population relate to a city or cities of specified size according to the 1960 Census of Population or a subsequent special census.

1. Each standard metropolitan statistical area must include at least:

   a. One city with 50,000 inhabitants or more, or

   b. Two cities having contiguous boundaries and constituting, for general economic and social purposes, a single community with a combined population of at least 50,000, the smaller of which must have a population of at least 15,000.

2. If each of two or more adjacent counties has a city of 50,000 inhabitants or more (or twin cities under 1b) and the cities are within 20 miles of each other (city limits to city limits), they are to be included in the same area unless there is definite evidence that the two cities are not economically and socially integrated.

Criteria of metropolitan character.—The criteria of metropolitan character relate primarily to the attributes of the contiguous county as a place of work or as a home for a concentration of nonagricultural workers.

3. At least 75 percent of the labor force of the county must be in the nonagricultural labor force.[2]

4. In addition to criterion 3, the county must meet at least one of the following conditions:

   a. It must have 50 percent or more of its population living in contiguous minor civil divisions[3] with a density of at least 150 persons per square mile, in an unbroken chain of minor civil divisions with such density radiating from a central city in the area.

   b. The number of nonagricultural workers employed in the county must equal at least 10 percent of the number of nonagricultural workers employed in the county containing the largest city in the area, or the county must be the place of employment of 10,000 nonagricultural workers.

---

[1] Central cities are those appearing in the standard metropolitan statistical area title. A "contiguous" county either adjoins the county or counties containing the largest city in the area, or adjoins an intermediate county integrated with the central county. There is no limit to the number of tiers of outlying metropolitan counties so long as all other criteria are met.

[2] Nonagricultural labor force is defined as those employed in nonagricultural occupations, those experienced unemployed whose last occupation was a nonagricultural occupation, members of the Armed Forces, and new workers.

[3] A contiguous minor civil division either adjoins a central city in a standard metropolitan statistical area or adjoins an intermediate minor civil division of qualifying population density. There is no limit to the number of tiers of contiguous minor civil divisions so long as the minimum density requirement is met in each tier.

c. The nonagricultural labor force living in the county must equal at least 10 percent of the number in the nonagricultural labor force living in the county containing the largest city in the area, or the county must be the place of residence of a nonagricultural labor force of 10,000.

5. In New England, the city and town are administratively more important than the county, and data are compiled locally for such minor civil divisions. Here, towns and cities are the units used in defining standard metropolitan statistical areas. In New England, because smaller units are used and more restricted areas result, a population density criterion of at least 100 persons per square mile is used as the measure of metropolitan character.

Criteria of integration.—The criteria of integration relate primarily to the extent of economic and social communication between the outlying counties and central county.

6. A county is regarded as integrated with the county or counties containing the central cities of the area if either of the following criteria is met:

a. Fifteen percent of the workers living in the county work in the county or counties containing central cities of the area, or

b. Twenty-five percent of those working in the county live in the county or counties containing central cities of the area.

Only where data for criteria 6a and 6b are not conclusive are other related types of information used as necessary. This information includes such items as average telephone calls per subscriber per month from the county to the county containing central cities of the area; percent of the population in the county located in the central city telephone exchange area; newspaper circulation reports prepared by the Audit Bureau of Circulation; analysis of charge accounts in retail stores of central cities to determine the extent of their use by residents of the contiguous county; delivery service practices of retail stores in central cities; official traffic counts; the extent of public transportation facilities in operation between central cities and communities in the contiguous county; and the extent to which local planning groups and other civic organizations operate jointly.

Criteria for titles.—The criteria for titles relate primarily to the size and number of central cities.

7. The complete title of an SMSA identifies the central city or cities and the State or States in which the SMSA is located:

a. The name of the standard metropolitan statistical area includes that of the largest city.

b. The addition of up to two city names may be made in the area title, on the basis and in the order of the following criteria:

(1) The additional city has at least 250,000 inhabitants.

(2) The additional city has a population of one-third or more of that of the largest city and a minimum population of 25,000, except that both city names are used in those instances where cities qualify under criterion 1b. (A city which qualified as a secondary central city in 1950 but which did not qualify in 1960 has been temporarily retained as a central city.)

c. In addition to city names, the area titles will contain the name of the State or States in which the area is located.

SMSA maps and definitions.—The location of SMSA's in the county as a whole is shown in the map on p. xii; for identification and location of SMSA's in each State, see individual maps of States beginning on p. 622.

The exact composition of each SMSA is shown in Appendix F.

Standard consolidated areas.—In view of the special importance of the metropolitan complexes around New York and Chicago, the Nation's largest cities, several contiguous SMSA's and additional counties that do not appear to meet the formal integration criteria but do have strong interrelationships of other kinds have been combined into the New York-Northeastern New Jersey and Chicago-Northwestern Indiana Standard Consolidated Areas (SCA's), respectively. The composition of the two SCA's is shown in Appendix F.

State economic areas.—State economic areas are relatively homogeneous subdivisions of States. They consist of single counties or groups of counties which have similar economic and social characteristics. The boundaries of these areas have been drawn in such a way that each State is subdivided into relatively few parts, with each part having certain significant characteristics which distinguish it from adjoining areas.

The State economic areas have been designed for use in tabulating and publishing census data of various types and for other purposes. In this volume, these areas and their components are identified only by codes and not by specific listing.

The grouping of the counties or equivalent subdivisions of the United States into State economic areas is the product originally of a special study sponsored by the Bureau of the Census in cooperation with the Bureau of Agricultural Economics and several State and private agencies for the 1950 censuses.[1] The 1960 set of SEA's represents a limited revision of the 1950 areas. This revision takes into account changes in the definitions of SMSA's.

The combination of counties into State economic areas has been made for the entire country, and in this process the larger standard metropolitan statistical areas (those in 1960 with a central city of 50,000 or more and a total population of 100,000 or more) have been recognized as metropolitan State economic areas. When a standard metropolitan statistical area is located in two or more States, each State part becomes a metropolitan State economic area. In New England this correspondence does not exist because State economic areas are composed of counties,

[1] For further discussion and materials on State economic areas and their uses, see Bureau of the Census, *State Economic Areas*, U.S. Government Printing Office, Washington, D.C., 1951.

whereas standard metropolitan statistical areas are composed of towns. Here a county with more than half its population in one or more standard metropolitan statistical areas is classified as a metropolitan State economic area if the county or combination of counties containing the standard metropolitan statistical area or areas has 100,000 inhabitants or more.

Counties.—The primary divisions of States are, in general, termed counties. In Louisiana, these divisions are known as parishes. The 24 election districts of Alaska, included in the previous edition of this *Data Book* as county equivalents, were consolidated into 19 on December 7, 1961. Because most of the series of data included in the present volume are not available for these combined election districts, this edition presents only totals for the State of Alaska.

In some States there are cities which are independent of any county organization and these constitute primary divisions of their States, namely, Baltimore in Maryland, St. Louis in Missouri, and 34 cities in Virginia. The District of Columbia is also included here as the equivalent of a county. The county equivalent designation of "Yellowstone National Park, part" in Montana continues to be identified as such. The former county equivalent designation "Yellowstone National Park, part" in Idaho was included in Fremont County and that in Wyoming was included in Park and Teton Counties on April 10, 1963.

As of December 31, 1965, there were 3,071 counties and parishes in the United States and 38 county equivalents, making a total of 3,109 (excluding the 19 election districts in Alaska). See Appendix B for further detail.

Since 1960, the number of counties declined by one—Norfolk County, Va., along with the city of South Norfolk, was consolidated into the City of Chesapeake; Princess Anne County, Va., was consolidated with the city of Virginia Beach; and Menominee County, Wis., was created from parts of Shawano and Oconto Counties within the Menominee Indian Reservation. During the same period, the number of county equivalents in conterminous United States remained the same at 38, as Franklin town, Va., (formerly part of Southampton County) and Fairfax town, Va., (formerly part of Fairfax County) became independent cities, offsetting the loss of the two county equivalents of Yellowstone National Park, which were included in adjacent counties in Idaho and Wyoming.

Cities.—The designation "city," in general, refers to a political subdivision of a State within a defined area over which a municipal corporation has been established to provide general local government for a specific population concentration. "Cities" as used in this volume refers to those places which are incorporated as cities, boroughs, towns, and villages with the exception that towns are not recognized as incorporated places in the New England States, New York, and Wisconsin. The towns in these States are minor civil divisions similar to the townships in some States and are not necessarily thickly settled centers of population such as the cities, boroughs, towns, and villages in other States. In this volume, the cities for which data are included in table 4 are those having a population of 25,000 inhabitants or more as reported in the 1960 Census of Population. All cities included are incorporated.

Urban places.—These places comprise all incorporated and unincorporated places having 2,500 inhabitants or more in 1960 and those towns, townships, and counties classified as urban in the 1960 Census of Population. For a definition of "urban," see text for Item 9 under the "Source Notes and Explanations" section.

A list of all urban places and their populations appears in Appendix A-2.

OTHER AREAS

The Bureau of the Census also collects and compiles statistics for other geographic entities which are not represented in this volume. Some of these are described below.

Congressional districts.—Congressional district boundaries are determined by State legislatures. The Congressional Apportionment Act of 1842 required every State populous enough to be entitled to more than one Representative to be divided by the State legislature into districts "composed of contiguous territory," each returning one member. While the districting requirement was omitted in the Apportionment Act of 1850, an act of 1862 revived the provisions of the original law of 1842. The Apportionment Act of 1872 continued the requirement of "contiguous territory" and added a provision that districts should contain "as nearly as practicable an equal number of inhabitants." The apportionment law of 1901 added the words "compact territory" to the previous requirement.

The number of Members in the House of Representatives is fixed by the Congress at the time of each apportionment. Between 1912 and 1959, the number of Representatives remained constant at 435. In 1959 the number was increased temporarily to 437 as a result of the admission of Alaska and Hawaii to the Union, each receiving 1 Representative. Following the 1960 census, the number of Representatives was again fixed at 435.

Statistical information for congressional districts is presented in the *Congressional District Data Book* series. The latest volume in this series was issued in 1963 and covered districts of the 88th Congress. The basic volume has been updated by the issuance of supplementary reports in 1965 and again in 1966 for those States that redistricted for the 89th and 90th Congresses.

Central business districts and major retail centers.—The primary objective of delineating "central business districts" (CBD's) is to provide a basis for comparing changes in business activity in the central business district with those in the remainder of the metropolitan area or of the central city. The delineation was accomplished by the Bureau of the Census with the cooperation of the Census Tract Committees representing a variety of local interests.

There are no universally accepted rules for determining what a CBD area should comprise. Therefore the Census Bureau, instead of providing rigid specifications for defining the CBD, provided a general characterization only. The Bureau described it as an area of very high land valuation, an area characterized by a high concentration

of retail businesses, offices, theaters, hotels, and "service" businesses, and an area of high traffic flow; and required that the CBD ordinarily should be defined to follow existing tract lines, i.e., to consist of one or more whole census tracts (see below).

CBD's have been delineated only in those cities of 100,000 inhabitants or more (according to the 1960 Census of Population or a subsequent special census) in which there was a local Census Tract Committee recommendation for such an area.

Major retail centers (MRC's) were defined by the Bureau of the Census as those concentrations of retail stores (located inside the standard metropolitan statistical areas in which the CBD cities are located but outside of the CBD's themselves) which include a major general merchandise store—usually a department store. MRC's include not only the planned shopping center but also the older string street and neighborhood developments which meet the above prerequisites.

Data on establishments, sales or receipts, and payroll for retail trade, hotels, and theaters for the CBD's and MRC's of each of selected large cities are shown in *U.S. Census of Business: 1963*, Vol. III, *Major Retail Centers*.

Urbanized areas.—Although the major objective of the Bureau of the Census in delineating urbanized areas was to provide a better separation of urban and rural population in the vicinity of the larger cities, individual urbanized areas have proved to be useful statistical areas. They correspond to areas called "conurbations" in some other countries. An urbanized area contains at least one city of 50,000 inhabitants or more in 1960,[5] as well as the surrounding closely settled incorporated places and unincorporated areas that meet the criteria listed below. An urbanized area may be thought of as divided into the central city or cities, and the remainder of the area, known as the urban fringe. All persons residing in an urbanized area are included in the urban population.

For the 1960 Census, urbanized areas were delineated in terms of the census results rather than on the basis of information available prior to the census, as was done in 1950. A peripheral zone was drawn around each 1950 urbanized area and around cities that were presumably approaching a population of 50,000. Within the unincorporated parts of this zone small enumeration districts were established, usually including no more than 1 square mile of land area and no more than 75 housing units.[6]

Arrangements were made to include within the urbanized area those enumeration districts meeting specified criteria of population density as well as adjacent incorporated places. Since the urbanized area outside incorporated places was defined in terms of enumeration districts, the boundaries for the most part follow such features as roads, streets, railroads, streams, and other clearly defined lines which may be easily identified by census enumerators in the field and often do not conform to the boundaries of political units.

In addition to its central city or cities, an urbanized area also contains the following types of contiguous areas, which together constitute its urban fringe:

1. Incorporated places with 2,500 inhabitants or more.

2. Incorporated places with less than 2,500 inhabitants, provided each has a closely settled area of 100 housing units or more.

3. Towns in the New England States, townships in New Jersey and Pennsylvania, and counties elsewhere which are classified as urban.

4. Enumeration districts in unincorporated territory with a population density of 1,000 inhabitants or more per square mile. (The areas of large nonresidential tracts devoted to such urban land uses as railroad yards, factories, and cemeteries were excluded in computing the population density of an enumeration district.)

5. Other enumeration districts in unincorporated territory with lower population density provided that they served one of the following purposes:

a. To eliminate enclaves,

b. To close indentations in the urbanized areas of 1 mile or less across the open end, and

c. To link outlying enumeration districts of qualifying density that were no more than 1½ miles from the main body of the urbanized area.

Contiguous urbanized areas with central cities in the same standard metropolitan statistical area are combined. Urbanized areas with central cities in different standard metropolitan statistical areas are not combined, except that a single urbanized area was established in the New York-Northeastern New Jersey Standard Consolidated Area, and in the Chicago-Northwestern Indiana Standard Consolidated Area.

The boundaries of the urbanized areas for 1960 do not conform to those for 1950, partly because of actual changes in land use and density of settlement, and partly because of relatively minor changes in the rules used to define the boundaries. In general, however, the urbanized areas of 1950 and 1960 are based on essentially the same concept, and the figures for a given urbanized area may be used to measure the population growth of that area.

Population and housing statistics for urbanized areas are published in Bureau of the Census, *U.S. Census of Population: 1960*, Vol. I, and *U.S. Census of Housing: 1960*, Vol. I.

Unincorporated urban places.—In advance of the enumeration for the 1960 Census of Population, the Bureau of the Census delineated the boundaries for densely settled population centers without corporate limits.

Census tracts.—Census tracts are small areas into which large cities and their adjacent areas have been divided for statistical purposes. Tract boundaries were established cooperatively by a local committee and the Bureau of the

[5] There are a few urbanized areas where there are "twin central cities," neither of which has a population of 50,000 or more but that have a combined population of at least 50,000.

[6] An enumeration district (ED) is a small area assigned to an enumerator which must be canvassed and reported separately. In most cases, an ED contained approximately 250 housing units.

Census, and were generally designed to achieve some uniformity of population characteristics, economic status, and living conditions. Initially, the average tract had about 4,000 residents. Tract boundaries were established with the intention of being maintained over a long time so that comparisons may be made from census to census.

1960 population and housing census data were published for tracts in 180 areas in the United States and the Commonwealth of Puerto Rico; these areas contain more than 23,000 tracts. Of the 180 areas, all but 2 were standard metropolitan statistical areas and 136 were completely tracted.

For a discussion of census tract data and their uses, see Bureau of the Census, *Census Tract Manual,* Fifth Edition, 1966. Population and housing statistics for each tracted area are published in Bureau of the Census, *U.S. Censuses of Population and Housing: 1960, Census Tracts,* Final Reports PHC(1)—1 to 180. In addition, photocopies of tabulated but unpublished 1960 census data for census tracts can also be provided at cost by the Bureau of the Census.

City blocks.—According to Bureau of the Census usage, a city block is usually a well-defined rectangular piece of land bounded by streets or roads. It may, however, be irregular in shape or bounded by railroad tracks, streams, or other features. 1960 housing census data by blocks are available for 421 cities or urban places which had a population of 50,000 or more. These data and identifying maps are presented in *U.S. Census of Housing: 1960,* Vol. III, *City Blocks,* Series HC(3).

Census county divisions.—For purposes of presenting census statistics, counties in 18 States have been subdivided by the Bureau of the Census into statistical areas called "census county divisions" (CCD's). These divisions are used instead of the election precincts, townships, or other minor civil divisions (see below) for which census statistics were previously reported because the boundaries of such minor civil divisions changed frequently or were indefinite.

CCD's were established in the State of Washington for use in the 1950 Census. Between 1950 and 1960 they were established in 17 additional States, of which 10 are in the West—Arizona, California, Colorado, Hawaii, Idaho, Montana, New Mexico, Oregon, Utah, and Wyoming—and 7 in the South—Alabama, Florida, Georgia, Kentucky, South Carolina, Tennessee, and Texas.

CCD boundaries normally follow physical features such as roads, highways, trails, railroads, power lines, streams, and ridges. Larger incorporated places are recognized as separate divisions, even though their boundaries may change as the result of annexations. Cities with 10,000 inhabitants or more generally are separate divisions. In addition, some incorporated places with as few as 2,500 inhabitants may be separate divisions. An unincorporated enclave within a city is included in the same CCD as the city.

In areas with census tracts (see above) each CCD is a census tract or group of tracts, or the combination of two CCD's represents one census tract.

The boundaries of CCD's were reviewed with officials in each county and various State agencies and were approved by the governors (or their representatives) of the States. A separate report for each CCD State which presents a description of the boundaries, has been issued by the Bureau of the Census as *U.S. Censuses of Population and Housing: 1960, Census County Division Boundary Descriptions,* PHC(3). The population of each county, by census county divisions, is shown in *U.S. Census of Population: 1960,* Vol. I, *Characteristics of the Population,* Part A, "Number of Inhabitants."

Minor civil divisions.—These component parts of counties have been used traditionally for the presentation of statistics. They represent political or administrative subdivisions of the States and may be townships, precincts, districts, independent municipalities, etc. In a number of States, however, these areas are unsatisfactory as a basis for compiling local statistics. The Bureau of the Census has, therefore, instituted a program of defining and presenting statistics for areas within counties, designated as census county divisions (see above).

In addition to the 6,558 census county divisions, a total of 31,309 minor civil divisions was recognized in the 1960 Census of Population. Of these latter, 4,494 were independent municipalities and the remainder were towns in the New England States, New York, and Wisconsin, and townships or other divisions in other States. For population figures, numbers, types, and maps of the minor civil divisions in each State, see *U.S. Census of Population: 1960,* Vol. I, Part A, cited above.

GEOGRAPHIC CODES

Codes for a number of areas are presented in the 3 columns preceding the stub of the first items for tables 2 and 4; also 1 column preceding the stub of table 3. They facilitate cross reference among the statistics for States, standard metropolitan statistical areas, counties, and cities, and identify each State economic area and its components.

The State code is a numbering in sequence of the alphabetical arrangement of the States, including the District of Columbia: Alabama, 01, to Wyoming, 51.

The standard metropolitan statistical area code is a similar numbering of the 224 SMSA's arranged alphabetically by name of area: Abilene (Tex.) area, 001, to Youngstown-Warren (Ohio) area, 224.

Within each State, the counties are numbered in alphabetical order beginning with 001. The county code, when prefixed by the State code, distinguishes each county in the United States.

The State economic area code consists of two parts (as 12–A, or 12–3). The first two digits are the code for the State in which the area is located; the second component is the State economic area code, as such, with a capital letter identifying a metropolitan State economic area, and an Arabic numeral indicating a nonmetropolitan area. Within each State, the State economic areas have been coded in a sequence which places together areas having the same general characteristics or possessing some major trait in common.

SOURCE NOTES AND EXPLANATIONS

Tables 1, 2, and 3

POPULATION AND AREA, 1960

Items 1–30 (except Items 3, 4, 6–8, and 13–18). General note.

The population statistics presented here are based on results of the 1960 Census of Population conducted by the Bureau of the Census as of April 1, 1960. The major portion of the information compiled from this census appears in Volume I, *Characteristics of the Population.* This volume consists of Parts 1 to 57—one for the United States, each of the 50 States, the District of Columbia, Puerto Rico, Guam, Virgin Islands, American Samoa, and Canal Zone—and Part A, *Number of Inhabitants.*

For a detailed listing of published and unpublished data available, see Bureau of the Census, *U.S. Census of Population: 1960—Availability of Published and Unpublished Data, 1961.*

Data on the number of inhabitants and the basic demographic characteristics of age, sex, race, relationship to head of household, and marital status were obtained by enumeration of the *total* population. All other census of population data were obtained from a *sample* consisting of the members of every fourth household and of every fourth person who was not a member of a household but was living in "group quarters." A "household," according to present usage of the Census Bureau, comprises all persons who occupy a "housing unit," which is defined as a house, an apartment or other group of rooms, or a single room that constitutes "separate living quarters" (see text for Item 32). A household includes the "related persons" (the head of the household and others related to the head) and also the lodgers and employees, if any, who regularly live in the unit. A person living alone, or a group of unrelated persons sharing the same housing unit as partners, are also considered as households.

For a measure of the sampling variability of the sample data and for comment regarding reliability of all the data, see the section on "Accuracy of the Data" in Volume I, cited above.

Items 1–2. Total population, 1960 and rank.

Source: Bureau of the Census, *U.S. Census of Population: 1960,* Vol I, *Characteristics of the Population.*

Each person enumerated in the 1960 census was counted as an inhabitant of his usual place of residence, which is generally construed to mean the place where he lives and sleeps most of the time. This place is not necessarily the same as his legal residence, voting residence, or domicile. In the vast majority of cases, however, the use of these different bases of classification would produce substantially the same statistics, although there might be appreciable differences for a few areas.

Persons who were in the Armed Forces and quartered on military installations were enumerated as residents of the States and counties in which their installations were located. Members of their families were enumerated where they actually resided. College students were considered residents of the communities in which they were residing while attending college. The crews of vessels of the U.S. Navy and U.S. merchant marine in harbors of the United States were counted as part of the population of the ports in which their vessels were berthed on April 1, 1960. Inmates of institutions, who ordinarily live in the institutions for long periods of time, were counted as inhabitants of the place in which the institution was located. Patients in general hospitals, who ordinarily remain in the hospital for short periods of time, were counted at, or allocated to, their homes. Persons without a usual place of residence were counted where they were enumerated.

Americans who were overseas for an extended period (in the Armed Forces, working at civilian jobs, studying in foreign universities, etc.) are not included in the population of any of the States or of the District of Columbia. Persons temporarily abroad on vacations, business trips, and the like, were enumerated at their usual residences on the basis of information received from members of their families or from neighbors.

Rank numbers were assigned on the basis of population size, with each area placed in descending order, greatest to smallest. Where ties occurred—two or more areas with identical populations—the same rank was assigned to the tied areas. In such cases, the following rank number was omitted in order to have the lowest rank equal to the number of areas ranked.

See general note for Items 1–30.

Items 3–4. Land area and population per square mile.

Source: Bureau of the Census, *Area Measurement Reports,* Series GE–20, and records.

The land area figures presented in this book are based on measurements of surface areas undertaken by the Bureau of the Census in 1964 for selected geographic units for which 1960 Census of Population statistics were published. The land area includes (a) dry land and land temporarily or partially covered by water, such as marshland, swamps, and river flood plains; (b) all streams, sloughs, estuaries, and canals that are less than one-eighth of a statute mile in width; and (c) all lakes, reservoirs, and ponds that are less than 40 acres in area.

The area figures given for Hawaii, North Carolina, Virginia, and Washington, D.C. are subject to revision because new data were not available for them at the time this book went to press.

The population per square mile is the average number of inhabitants per square mile of land area. (See text for Items 1–2.)

Item 5. Population change, 1950–1960, total.

Source: Same as Item 1.

The 1950 figures used as a base to compute the percentage change for standard metropolitan statistical areas apply to the areas as defined December 31, 1965. For other areas, the 1950 figures apply to area boundaries existing in 1950.

Items 6–7. Net migration and natural increase, 1950–1960.

Source: Bureau of the Census, *Current Population Reports,* Nov. 1962, Series P–23, No. 7.

The two major components of population change for any area are net migration and natural increase. Net migration represents the difference between the number of persons moving into a particular area and the number moving away from the area. A positive figure indicates net in-migration to the area; a negative figure indicates net out-migration from the area.

Natural increase represents the difference between the number of births and the number of deaths during a given period. A positive figure indicates a greater number of births than deaths; a negative figure indicates a greater number of deaths than births.

Entries for these two items are in terms of the net percent change from 1950 to 1960. The 1950 figures used as a base to compute the change for standard metropolitan statistical areas apply to the areas as defined December 31, 1965. For other areas, the 1950 figures apply to area boundaries existing in 1950.

POPULATION INCREASE, 1960-1965

Item 8. Natural increase in population.

Source: Same as Item 1 and Department of Health, Education, and Welfare, Public Health Service, *Vital Statistics of the United States,* Vols. I and II for 1960, 1961, 1962, 1963, and 1964.

For explanation of "natural increase," see text for Items 6–7.

Entries for this item represent percent changes from April 1960 to April 1965. Since the available information covers calendar years 1960 through 1964, compilation of this item required the combination of 75 percent of the 1960 results (representing the period April 1 through December 31, 1960) with 1961, 1962, 1963, and 1964 results, plus 25 percent of the 1964 results (representing the period January 1 through March 31, 1965).

The 1960 figures used as a base to compute the percent change for standard metropolitan statistical areas apply to the area as defined December 31, 1965. For other areas, the 1960 figures apply to area boundaries existing in 1960.

POPULATION CHARACTERISTICS, 1960

Item 9. Urban population.

Source: Same as Item 1.

The urban population comprises all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, villages, and towns (except towns in New England, New York, and Wisconsin); (b) the densely settled urban fringe, whether incorporated or unincorporated, of urbanized areas; (c) towns in New England and townships in New Jersey and Pennsylvania which contain no incorporated municipalities as subdivisions and which have either 25,000 inhabitants or more, or a population of 2,500 to 25,000, and a density of 1,500 persons or more per square mile; (d) counties in States other than the New England States, New Jersey, and Pennsylvania that have no incorporated municipalities within their boundaries and have a density of 1,500 persons or more per square mile; and (e) unincorporated places of 2,500 inhabitants or more.

See text for Items 1–2.

Item 10. Negro population.

Source: Same as Item 1.

In addition to persons of Negro and of mixed Negro and white descent, this classification includes persons of mixed Indian and Negro descent, unless the Indian ancestry very definitely predominates or unless the individual is regarded as an Indian in the community.

See text for Items 1–2.

Item 11. Foreign Stock.

Source: Same as Item 1.

Both the foreign-born population and the native population of foreign or mixed parentage are included in the term "foreign stock." The foreign-born population covers all persons residing in the United States who are not natives. The native population includes all persons born in the United States, the Commonwealth of Puerto Rico, or a possession of the United States, and a small number of persons who, although they were born in a foreign country or at sea, have at least one native American parent. The category "native of foreign or mixed parentage" comprises native persons, one or both of whose parents are foreign born.

See text for Items 1–2.

Item 12. Population, 65 years old and over.

Source: Same as Item 1.

Age classification is based on the age of the person in completed years as of April 1, 1960.

See general note for Items 1–30.

PRESIDENTIAL VOTE, 1964 and 1960.

Items 13–15. Vote cast for President, 1964, and percent for leading party, 1964 and 1960.

Source: Governmental Affairs Institute, *America at the Polls,* University of Pittsburgh Press, 1965. (Copyright.)

The minimum age for voting is 21 years in all States except: Alaska, 19 years; Georgia, 18 years; Hawaii, 20 years; and Kentucky, 18 years.

In some areas neither the Democratic nor the Republican Party received a plurality of votes cast. For such areas, the figures for Items 14 and 15 represent only the percent of the total vote cast for the Democratic or the Republican Party, whichever was greater.

VITAL STATISTICS

Items 16–17. Births and deaths, 1964.

Source: Department of Health, Education, and Welfare, Public Health Service, *Vital Statistics of the United States, 1964,* Vols. I and II (for items 16 and 17 respectively).

These figures are based on information contained in the original certificates filed in the State and, in some cases, city bureaus of vital statistics. They represent registered occurrences only, and cover only births and deaths occurring within the reporting areas. Deaths of, and births to, American nationals that occurred in other parts of the world are excluded. Births to, and deaths of, foreign nationals occurring within the United States are included.

All data shown here are classified by place of residence. For births, "place" means the mother's usual place of residence; for deaths, it means the usual place of residence of the deceased person prior to death.

All deaths which occur in institutions are allocated to the reported place of *prior* residence, regardless of the length of time spent in the institution by the deceased prior to death.

Item 18. Marriages, 1964.

Source: Department of Health, Education, and Welfare, Public Health Service, records.

For 47 States, except for a few counties in Texas and New Mexico, the figures represent marriages performed. For those counties, for counties in Colorado, Kentucky, and Washington, and for the District of Columbia, the figures are based on marriage licenses issued. Marriage data for Massachusetts are estimated.

All figures are classified by place of occurrence.

EDUCATION, 1960

Items 19–21. School years completed by persons 25 years old and over.

Source: Same as Item 1.

Data refer to the highest grade (or year) of regular school completed. Regular school refers to formal education of the type mentioned below for Item 22. Approximate equivalent grades were used for persons whose highest grade of attendance was in a foreign school system, whose highest level of attendance was in an ungraded school, whose highest level of schooling was measured by "readers," or whose training by a tutor was regarded as qualifying under the "regular" school definition.

The median number of school years completed is the value which divides the population group into two equal parts—one-half having completed more, and the other half less, schooling than the median.

See general note for Items 1–30.

Item 22. School enrollment of persons 5 to 34 years old.

Source: Same as Item 1.

The data include persons reported as attending or enrolled in a regular school or college at any time between February 1, 1960, and the date of census enumeration. Regular schooling is schooling that may advance a person toward an elementary school certificate or high school diploma, or a college, university, or professional degree. Schooling generally regarded as not regular includes schooling given in nursery schools; in specialized vocational, trade, or business schools; in on-the-job training; and through correspondence courses. Schooling not obtained in a regular school and schooling from a tutor or through correspondence courses are included only if the credits obtained were regarded as transferable to a school in the regular school system.

As defined here, elementary school includes grades 1 through 8; high school includes grades 9 through 12; and college includes junior or community colleges, regular 4-year colleges, and graduate or professional schools.

See general note for Items 1–30.

EMPLOYMENT, 1960

Items 23–25. General note.

The data on employment relate to the calendar week prior to the date on which the persons provided the information. This week is not the same for all persons because not all were enumerated during the same week; the majority, however, were enumerated during the first half of April.

These data were obtained from persons in their own households and differ from figures obtained from business establishments, farm enterprises, and certain governmental programs. For example, data from households refer to place of residence, represent an unduplicated count, and cover all types of workers, whereas data from business establishments, etc., refer to place of work, include more than once those persons who worked for more than one establishment during the reporting period, and generally exclude private household workers, unpaid family workers, and self-employed workers. In addition, somewhat different industrial classification systems are normally used for the two types of data.

The industrial classification system developed for the 1960 Census of Population is organized into 13 major industry groups and consists of 150 categories; the occupational classification system consists of 494 detailed items

classified into 12 major groups, including an "occupation not reported" group. For the composition of each specific industry or occupation, see Bureau of the Census, *1960 Census of Population, Classified Index of Occupations and Industries.*

Item 23. Total employment.

Source: Same as Item 1.

Total employment refers to all civilians 14 years old and over who were either (a) "at work"—those who did any work for pay or profit or worked without pay for 15 hours or more on a family farm or in a family business—or (b) "with a job but not at work"—those who did not work and were not looking for work, but had a job or business from which they were temporarily absent because of bad weather, industrial dispute, vacation, illness, or other reasons.

See also general note for Items 1–30 and Items 23–25.

Item 24. Employment in manufacturing.

Source: Same as Item 1.

This category includes the following subgroups: Furniture, and lumber and wood products; primary metal industries; fabricated metal industries; machinery, except electrical; electrical machinery, equipment, and supplies; motor vehicles and motor vehicle equipment; transportation equipment, except motor vehicle; other durable goods; food and kindred products; textile mill products; apparel and other fabricated textile products; printing, publishing, and allied industries; chemicals and allied products; and other nondurable goods.

See also general note for Items 1–30 and Items 23–25.

Item 25. Employment in white collar occupations.

Source: Same as Item 1.

Figures refer to employed persons in the following occupational groups:

a. Professional, technical, and kindred workers.
b. Managers, officials, and proprietors, except farm.
c. Clerical and kindred workers.
d. Sales workers.

For additional information on the composition of these groups, see source, and *1960 Census of Population, Classified Index of Occupations and Industries.* See also general note for Items 1–30 and Items 23–25.

INCOME, FAMILIES, AND PUBLIC ASSISTANCE

Item 26. Aggregate income in 1959 of the population, 1960.

Source: Same as Item 1.

Income is the sum of money received in 1959 (less losses) from the following sources: Wages or salary; net income (or loss) from self-employment; net income (or loss) from rents or receipts from roomers or boarders; royalties; interest, dividends, and periodic income from estates and trust funds; social security benefits; pensions; veterans' payments, Armed Forces allotments for dependents, unemployment insurance, and public assistance or other governmental payments; and other income, such as contributions for support from persons who are not members of the household, alimony, and periodic receipts from insurance policies or annuities. The figures represent the amount of income received before deductions for personal income taxes, social security, bond purchases, union dues, etc.

Aggregate income is the amount received by all income recipients 14 years old and over from all income sources. It was obtained by multiplying the *mean* income by the number of income recipients.

Item 27. Families, 1960.

Source: Same as Item 1.

A family consists of two or more persons living in the same household and related to one another by blood, marriage, or adoption; all persons living in one household and related to one another are regarded as one family. Not all households contain families, because a household may be composed of a group of unrelated persons or of one person living alone. A few households contain more than one family; for example, two family groups in the same household with no member of one family related to any member of the other family.

See also general note for Items 1–30.

Items 28–30. Income in 1959 of families, 1960.

Source: Same as Item 1.

Family income represents, as a single amount, the combined incomes of the head of the family and all other members 14 years old and over. (See text for Items 26 and 27.) Although the time period covered by the income statistics is the calendar year 1959, the figures for families refer to April 1960. Thus, on the one hand, family income does not include amounts received by persons who were members of the family during all or part of the calendar year 1959 if these persons no longer resided with the family in April 1960. On the other hand, family income includes amounts reported by related persons who did not reside with the family during 1959 but who were members of the family in April 1960.

Family *median* income is the amount of income which divides the distribution of families into two equal groups —one having incomes above, and the other having incomes below, the median.

Item 31. Public assistance recipients, 1964.

Source: Department of Health, Education, and Welfare, Welfare Administration, *Recipients of Public Assistance and Total Assistance Payments, by Program, State, and County, June 1964.*

Each June and December, State welfare agencies report to the Bureau of Public Assistance the number of persons covered under each public assistance program. The data shown here represent figures for June 1964.

Public assistance programs provide financial help to eligible recipients for living expenses (such as food, shelter, clothing), medical care, and social services. Payments for

medical needs may be made directly to the individual or may be made in his or her behalf to suppliers of services, such as doctors, hospitals, and druggists. The data presented here cover the following programs, which are joint undertakings of State, local, and Federal governments: Old age assistance, medical assistance for the aged, aid to dependent children, aid to the blind, and aid to the permanently and totally disabled. Also included are general assistance programs, which are administered and financed by States or localities without Federal participation.

HOUSING, 1960

Items 32–39. General note.

The housing statistics presented here are based on results of the 1960 Census of Housing conducted by the Bureau of the Census as of April 1, 1960. The major portion of the information compiled from this census for geographic areas appears in *U.S. Census of Housing: 1960,* Vol. I, *States and Small Areas.* This volume consists of 55 parts—one for the United States, each of the 50 States, the District of Columbia, Puerto Rico, Guam, and Virgin Islands. For a detailed listing of the data available, see Bureau of the Census, *U.S. Census of Housing: 1960 —Availability of Published and Unpublished Data,* 1961.

Although some information in the census was collected for all housing units, information for most of the items was collected for samples of housing units. Sample items were based on 5, 20, or 25 percent of the housing units. For items enumerated for all housing units, moreover, the original tabulations were not always based on the complete count; data for some of these items were tabulated for a sample of units, particularly for areas with large population. For a measure of the sampling variability and for a more comprehensive discussion of the sampling data, see the text on "Sample Design and Sampling Variability" in the source publication.

Medians and percentages are not shown where the base (e.g., all housing units or number of occupied units) is smaller than a required minimum. For items tabulated on a complete count basis, they are not shown if the base is less than 50 housing units; for items tabulated on a sample basis, they are not shown if the base, after inflation, is less than 200 units.

Item 32. Housing units.

Source: Bureau of the Census, *U.S. Census of Housing: 1960,* Vol. I, *States and Small Areas.*

In the 1960 census, living quarters were enumerated as housing units or as group quarters. A housing unit is a house, an apartment or other group of rooms, or a single room which is occupied or intended for occupancy as separate living quarters; that is, the occupants do not live and eat with any other persons in the structure, and there is either (a) direct access from the outside or through a common hall, or (b) a kitchen or cooking equipment for the exclusive use of the occupants. Trailers, tents, boats, and railroad cars were included if they were occupied as living quarters; they were excluded if they were vacant or used only for extra sleeping space, vacations, or business. Also excluded were living quarters of the following types: Accommodations predominantly for transients; barracks for workers; living quarters in institutions, general hospitals, and military installations (except for housing units in buildings containing only family quarters for staff members).

See general note for Items 32–39.

Item 33. Units in 1-unit structures.

Source: Same as Item 32.

A 1-unit structure is a separate building that has either open space on all four sides or is separated from other structures by dividing walls that extend from ground to roof. Thus, a 1-unit structure may be a row house, a double house, or a house attached to a nonresidential structure. Figures refer to all units, occupied and vacant.

See general note for Items 32–39.

Item 34. Sound units with all plumbing facilities.

Source: Same as Item 32.

A sound housing unit is defined as one with no defects, or only slight defects which are normally corrected during the course of regular maintenance. Examples of slight defects are lack of paint; slight damage to porch or steps; small cracks in walls, plaster, or chimneys; and broken gutters or downspouts.

Housing units with all plumbing facilities include units which have hot and cold running water inside the structure, and flush toilet and bathtub or shower inside the structure for the exclusive use of the occupants.

See general note for Items 32–39.

Item 35. Occupied units.

Source: Same as Item 32.

A housing unit is defined as occupied if it was the usual place of residence for the person or group of persons living in it at the time of census enumeration. Included are units occupied by persons who were only temporarily absent and units occupied by persons with no usual place of residence elsewhere.

See general note for Items 32–39.

Items 36–37. Owner-occupied units and median value.

Source: Same as Item 32.

A housing unit is owner occupied if the owner or coowner lives in it, even if it is mortgaged or not fully paid for. For definition of occupied units, see text for Item 35.

Value figures are based on the respondent's estimate of the sales value of the property (house and land) in April 1960. They are restricted to property having only one housing unit and no business establishment. Units in multiunit structures, trailers, units on farms, and all units on places of 10 acres or more (whether farm or nonfarm) are excluded.

The median value is the theoretical value which divides the distribution of units into two equal parts—one-half the

units falling below this value and the other half exceeding it. In the tabulation of data on value, the lowest tabulation group used was "Less than $5,000." In cases where the median value falls into this group, a value of $5,000 followed by a minus sign is used.

Correspondingly, the highest tabulation group used for occupied units was "$35,000 or more." When the median value falls into this group, $35,000 followed by a plus sign is used.

See general note for Items 32–39.

Item 38. Median gross rent, renter-occupied units.

Source: Same as Item 32.

Gross rent is the contract rent plus the average monthly cost of utilities (water, electricity, gas) and fuels, such as wood, coal, and oil, if these items are paid for by the renter. The data exclude rents for farm housing units in rural areas.

The median rent is the theoretical rent which divides the distribution into two equal parts—one-half the cases falling below this rent and the other half exceeding it. Renter-occupied units for which no cash rent was paid and farm units in rural areas were excluded from the computation of the median.

See general note for Items 32–39.

Item 39. Index of home equipment.

Source: Same as Item 32.

This index reflects the extent to which occupied housing units have certain specified types of home equipment. It was derived by adding together the percents of occupied units with clothes washing machine, home food freezer, air conditioning, television set, telephone, and automobile. The highest possible index is 600.

See general note for Items 32–39.

BANKING, 1964

Items 40–43. Bank deposits, 1964, and change, 1960–1964.

Source: Board of Governors of the Federal Reserve System, *Distribution of Bank Deposits by Counties and Standard Metropolitan Areas, June 30, 1964.*

Figures are as of June 30. Total deposits cover all banks in the United States, commercial and mutual savings. In addition to the time and demand deposits shown here, they include interbank and governmental deposits. The percent changes from 1960 to 1964 refer to total deposits.

Demand and time deposits cover only deposits of individuals, partnerships, and corporations. Time deposits consist principally of savings deposits of individuals, subject to withdrawal only after 30 days notice, and of other deposits which may not be withdrawn in less than 30 days. Demand deposits are those which can be withdrawn without prior notice. Deposits of branches located outside the county or area of the head office of a bank are included with figures for the counties or areas in which the branches are situated, rather than with those for the area of the head office.

Items 44–45. Savings and loan associations: Savings capital, 1964, and change, 1960–1964.

Source: Federal Home Loan Bank Board, records.

Figures are as of December 31. They represent the savings and investments of the public in savings and loan association members of the Federal Home Loan Bank System, a credit reserve system for home financing institutions. These institutions are also known sectionally as cooperative banks or building and loan or homestead associations. As of December 31, 1964, there were 6,222 savings and loan associations of which 4,985, or 80 percent, were member associations of the FHL Bank System. Aggregate resources of members amounted to 117.4 billion dollars, or 98 percent of the total resources (119.4 billion dollars) of all associations. Member associations include 1,981 Federally chartered savings and loan associations (resources 61.6 billion dollars) and 3,004 State-chartered associations (resources 55.8 billion dollars).

LOCAL GOVERNMENT FINANCES, 1962

Items 46–57. General note.

Local governments statistics are based on results of the 1962 Census of Governments conducted by the Bureau of the Census. For each county, the financial data comprise amounts for all local governments—not only the county government but also any municipalities, townships, school districts, and special districts within the county. To avoid duplication, revenue and expenditure figures are net of reported transactions among local governments. Statistics of governmental units located in two or more county areas were prorated to the county areas involved.

Revenue and expenditure items include, respectively, all amounts of money received and paid out by a government and its agencies (net of correcting transactions such as recoveries or refunds), with the exception of amounts for debt issuance and retirement and for loan and investment, agency, and private trust transactions.

Payments among the various funds and agencies of a particular government are excluded from revenue and expenditure as representing internal transfers. Thus, a government's contribution to a retirement fund which it administers is not counted as expenditure, nor is the receipt of this contribution by the retirement fund counted as revenue.

Governmental expenditure includes all capital outlay, of which a major portion is commonly financed by borrowing. Receipts from borrowing are not included as governmental revenue, however. Thus, the relationship between the revenue and expenditure figures shown here should not be considered a direct measure of the degree of budgetary "balance," as that term is usually applied.

Items 46–49. General revenue.

Source: Bureau of the Census, *Census of Governments: 1962,* Vol. IV, No. 4, *Compendium of Government Finances,* and Vol. V, *Local Government in Metropolitan Areas.*

General revenue includes all revenue except utility, liquor stores, and insurance trust revenue. All tax collections and intergovernmental revenue, even if designated for insurance trust or local utility purposes, are classified as general revenue.

Intergovernmental revenue covers receipts from other governments for fiscal aid or as reimbursement for performance of general services for the paying government. It excludes any amounts received from other governments for sale of property, commodities, and utility services.

Taxes consist of compulsory contributions exacted by governments for public purposes. However, this category excludes employer and employee payments for retirement and social insurance purposes, which are classified as insurance trust revenue, and special assessments, which are classified as nontax general revenue.

Property taxes are taxes conditioned on ownership of property and measured by its value.

See general note for Items 46–57.

Items 50–56. General expenditure.

Source: Same as Items 46–49.

Total general expenditure includes all expenditures of a government except utility, liquor stores, and insurance trust expenditure. The per capita figures exclude expenditures for construction, equipment, and purchase of land and existing structures, all of which are classified as capital outlay.

Local government expenditures for education are mainly for provision and support of schools and other educational facilities and services, including those of educational institutions beyond the high school level operated by local governments. They cover such related services as pupil transportation; school lunch and other cafeteria operations; school health, recreation, and library services administered by local school systems; and dormitories, dining halls, and bookstores operated by public institutions of higher education.

Highway expenditures are for provision and maintenance of highway facilities, including toll turnpikes, bridges, tunnels, and ferries, as well as regular roads, highways, and streets. Also included are expenditures for street lighting and for snow and ice removal.

Public welfare expenditures cover governmental activities relative to institutional and noninstitutional assistance to the needy and administration of such assistance. They include cash payments for general relief; payments made under the programs for old age assistance, aid to dependent children, aid to the blind, and aid to the disabled; vendor payments made to private purveyors for medical care, burials, and other services provided under welfare programs; welfare institutions; and any intergovernmental or other direct expenditure for welfare purposes.

Public health and hospital expenditures cover health research, clinics, nursing, immunization, and other general public health activities; establishment and operation of hospital facilities; provision of hospital care; and support of other public or of private hospitals.

Police protection expenditures cover preservation of law and order and traffic safety. They include expenditures for highway police patrols, crime prevention activities, police communications, detention and custody of persons awaiting trial, traffic safety, vehicular inspection, etc.

See general note for Items 46–57.

Item 57. Debt outstanding.

Source: Same as Items 46–49.

Debt outstanding includes all long-term credit obligations of the government and its agencies, and all interest-bearing short-term (that is, repayable within one year) credit obligations. It includes judgments, mortgages, and "revenue" bonds, as well as general obligation bonds, notes, and interest-bearing warrants. It excludes noninterest-bearing short-term obligations, interfund obligations, amounts owed in a trust or agency capacity, advances and contingent loans from other governments, and rights of individuals to benefits from employee-retirement or other social insurance funds.

See general note for Items 46–57.

GOVERNMENT EMPLOYMENT

Items 58–59. Local government employment, October 1962.

Source: Bureau of the Census, *Census of Governments: 1962*, Vol. III, *Compendium of Public Employment*, and Vol. V, *Local Government in Metropolitan Areas*.

Data for number of employees are as of the middle of October, 1962. Part-time employees are included on a full-time equivalent basis.

Payroll figures represent gross payroll before deductions. They comprise salaries, wages, fees, and other compensation paid to employees for the month of October 1962.

Item 60. Federal Government employment, December 1965.

Source: U.S. Civil Service Commission, records.

Figures are as of December 31. They are based on information from the Commission's annual survey of geographic distribution of Federal civilian employment.

EMPLOYMENT UNDER SOCIAL SECURITY COVERAGE, 1964

Items 61–63. Employment and payrolls.

Source: Bureau of the Census, *County Business Patterns, 1964*.

These figures were derived from employment and payroll information reported on Treasury Form 941, Schedule A, supplemented by a special survey of multiunit companies. The special survey was designed to provide industry and county detail needed for *County Business Patterns* purposes but not reported on Treasury Form 941. The Social Security Administration cooperated closely with the Bureau of the Census in the development and the assembling of the data.

The data represent the following types of employment covered under the Federal Insurance Contributions Act:

(a) All covered wage and salary employment of private nonfarm employers, and of nonprofit membership organizations under compulsory coverage; and (b) all employment of religious, charitable, educational, and other nonprofit organizations covered under the elective provisions of the Federal Insurance Contributions Act. Data for the following types of employment covered by the Social Security Program in whole or in part are excluded: Government employees, self-employed persons, farm workers, and domestic service workers reported separately. Also excluded are railroad employment subject to the Railroad Retirement Act and employment on oceanborne vessels.

The statistics are presented on the basis of reporting units. A reporting unit is, generally, a single establishment or a group of similar establishments operated by one employer. Nonmanufacturing establishments of an employer are grouped into a single reporting unit if they are in the same county and engaged in the same kind of business. For manufacturing industries, reporting units represent single establishments.

The sum of the county figures for a particular State usually does not equal the State total shown because "Statewide" reporting units are included in the State totals. "Statewide" reporting units are those without a fixed location within the State, or with a significant number of employees in more than one county, or of unknown county locations. This incomplete county detail causes only slight understatement of county employment.

Mid-March pay period employment represents a count of employees during the pay period ending nearest March 15, 1964, as reported on Treasury Form 941, or as corrected by estimates in cases where it was incompletely or improperly reported.

Figures for taxable payrolls, January-March, represent the amount of taxable wages paid for "covered employment" during the quarter. Under the law in effect in 1964, taxable wages for covered employment were all payments up to the first $4,800 paid to any one employee by any one employer during the year, including the cash value of payments in kind. Generally, first quarter taxable wages closely approximate total wages. All payments for covered employment in the first quarter were taxable unless the employee was paid at the rate of more than $19,200 per year.

MANUFACTURES, 1963

Items 64–86. General note.

The 1963 Census of Manufactures covers all establishments primarily engaged in manufacturing as defined in the 1957 edition of the *Standard Industrial Classification Manual,* as amended,[1] except establishments owned and operated by the Federal Government.

The SIC Manual defines manufacturing as the mechanical or chemical transformation of inorganic or organic substances into new products. The assembly of component parts of products is also considered to be manufacturing, if the resulting product is neither a structure nor other fixed improvement. These activities are usually carried on in plants, factories, or mills, which characteristically use power-driven machines and materials-handling equipment.

The Census of Manufactures is conducted on an establishment basis. Thus, a company operating establishments at more than one location is required to submit a report for each location. In addition, companies engaged in distinctly different lines of activity at one location are required to submit separate reports, provided the plant records permit such a separation and provided the activities are substantial in size. Census tabulations of establishment reports, therefore, differ from tabulations prepared on a company basis, i.e., from consolidated reports which combine activities at different locations. Reports were required from all establishments employing one or more persons at any time during 1963.

Companies were asked to file a special report form for any central administrative office that was at a different general location from the establishments managed or served, or that was at the same location as one of the establishments but not operated as an integral part of the establishment. Employees in central administrative offices are concerned with the general supervision and control of two or more units such as manufacturing plants, mines, sales branches, or stores. Auxiliaries are separate storage facilities, garages, repair shops, purchasing offices, sales promotion offices, development and research organizations, etc., serving the plants or central management of the company. Figures for manufactures include statistics for separate central administrative offices and auxiliary units.

Items 64–65. All employees: Annual average and payroll.

Source: Bureau of the Census, *1963 Census of Manufactures,* Series MC63(3), to be subsequently presented in Vol. III, *Area Statistics.*

Figures comprise all full-time and part-time employees on the payrolls of operating manufacturing establishments who worked or received pay for any part of the pay period which included the 12th and ended nearest the 15th of 4 specified months (see below). Included are all persons on paid sick leave, paid holidays, and paid vacation during these pay periods. Excluded are members of the Armed Forces and pensioners on the active rolls but not working during the period. Officers of corporations are included as employees; proprietors and partners of unincorporated firms are excluded.

Employee figures were reported separately for "production and related workers" and for "all other employees." Figures for the former were for midmonth employment in March, May, August, and November; for "all other employees," only for mid-March employment. Thus, the figures for Item 64 are an average of the 4 monthly figures for "production workers" plus the March figure for "all other employees."

Payroll includes the gross earnings paid in 1963 to all employees of operating manufacturing establishments. Included are all forms of compensation, such as salaries,

[1] Executive Office of the President, Bureau of the Budget, *Standard Industrial Classification Manual,* 1957, and "Supplement to 1957 Edition," 1963, U.S. Government Printing Office, Washington, D.C. 20402.

wages, commissions, dismissal pay, bonuses, vacation and sick leave pay, and compensation in kind, prior to such deductions as employees' social security contributions, withholding taxes, group insurance, union dues, and savings bonds. Payroll also includes salaries of officers of an incorporated establishment. Excluded are payments on drawing accounts of proprietors or partners, payments to members of Armed Forces and pensioners on the active payroll, and employers' social security contributions or other nonpayroll labor costs.

Employment and payroll figures include central administrative offices and auxiliaries.

See general note for Items 64–86.

Items 66–68. Production workers: Annual average, man-hours, and wages.

Source: Same as Items 64–65.

The number of production workers includes all production and related workers (up through the working foreman level) engaged in fabricating, processing, assembling, inspection, receiving, storage, handling, packing, warehousing, shipping (but not delivering), maintenance, repair, and janitorial and watchman services; product development; auxiliary production for plants' own use (e.g., power plant); recordkeeping; and other services closely associated with these production operations, at the establishments covered by the Census reports. Supervisory employees above the working foreman level are excluded.

Man-hours consist of all plant man-hours of production and related workers, including actual overtime hours. They include all man-hours worked or paid for in 1963 except hours paid for vacations, holidays, and sick leave, when the employee was not at the plant. If an employee elected to work during his vacation period, only the hours actually worked were counted.

Wages represent all compensation paid to production workers, before deductions.

See general note for Items 64–86.

Item 69. Value added by manufacture.

Source: Same as Items 64–65.

Value added by manufacture is derived by subtracting the total cost of materials (including raw materials, supplies, fuel, electric energy, goods purchased for resale, and miscellaneous receipts) from the value of shipments (including resales) and other receipts, and adjusting the resulting amount by the net change in finished products and work-in-process inventories between the beginning and end of the year.

See general note for Items 64–86.

Item 70. Capital expenditures, new.

Source: Same as Items 64–65.

Figures represent expenditures made during 1963 for permanent additions and major alterations to manufacturers' plants, as well as for new machinery and equipment purchases that were chargeable to fixed-asset accounts and were of a type for which depreciation accounts are ordinarily maintained. Expenditures for machinery and equipment include those made for replacement purposes, as well as for additions to plant capacity. Excluded are costs of maintenance and repairs charged as current operating expense, expenditures for land, and expenditures made by owners of plants and equipment leased to reporting manufacturers. Also excluded are facilities owned by the Federal Government but operated under contract by private companies, and plant and equipment furnished to the manufacturers by communities and organizations.

See general note for Items 64–86.

MANUFACTURES, 1958

Items 71–72. All employees and value added by manufacture, 1958.

Source: Same as Items 64–65.

For definition of concepts, see text for Items 64–65 and 69. See also general note for Items 64–86.

MANUFACTURING ESTABLISHMENTS, 1963

Items 73–76. Manufacturing establishments, by employment size class.

Source: Same as Items 64–65.

A manufacturing establishment is generally defined as a single physical location where mechanical or chemical transformation of materials into new products is performed; e.g., a factory, mill, or plant. An establishment is not necessarily identical with the business concern or firm, which may consist of one or more establishments. It is also to be distinguished from organizational subunits, departments, or divisions within an establishment.

The minimum size for including establishments is limited to establishments employing one or more persons at any time during the census year. This limitation has applied since 1947.

See general note for Items 64–86.

Items 77–86. Manufacturing establishments with 20 or more employees, by industry groups.

Source: Same as Items 64–65.

The approximately 425 manufacturing industries covered in the 1963 Census of Manufactures have been classified into 21 major industry groups, based on definitions in the *Standard Industrial Classification Manual* (see reference under Items 64–86). Some of these groups have been combined for this publication, as described below. The 2-digit numbers following the titles for Items 77–86 represent the SIC major-group designations. See also general note for Items 64–86.

Item 77. Food and tobacco products (20 and 21).

Group 20—Food and kindred products: Covers establishments primarily engaged in the manufacture of foods and beverages for human consumption, and certain related products such as manufactured ice, chewing gum, vegetable and animal fats and oils, and prepared feeds for animals and fowls.

Group 21—Tobacco manufactures: Covers establishments primarily engaged in manufacturing cigarettes, cigars, smoking and chewing tobacco, and snuff, and in stemming and redrying tobacco.

Item 78. Textile, apparel, and leather products (22, 23, and 31).

Group 22—Textile mill products: Covers establishments engaged in any of the following operations: (a) Preparation of fiber and subsequent manufacturing of yarn, thread, braids, twine, and cordage; (b) manufacturing broad or narrow woven fabric, knit fabric, and carpets and rugs from yarn; (c) dyeing and finishing fiber, yarn, and knit apparel; (d) coating, waterproofing, or otherwise treating fabric; (e) the integrated manufacture of knit apparel and other finished articles from yarn; and (f) the manufacture of felt goods, lace goods, bonded-fiber fabrics, and miscellaneous textiles.

Group 23—Apparel and related products: Covers establishments producing clothing and fabricated products by cutting and sewing purchased woven or knit textile fabrics and related materials such as leather, rubberized fabrics, plastics, and furs.

Group 31—Leather and leather products: Covers establishments primarily engaged in tanning, currying, and finishing hides and skins, and establishments manufacturing finished leather and artificial leather products and some similar products made of other materials.

Item 79. Paper and printing (26 and 27).

Group 26—Paper and allied products: Covers establishments primarily engaged in the manufacture of pulps from wood and other cellulose fibers, and rags; the manufacture of paper and paperboard; the manufacture of paper and paperboard into converted products such as coated paper, paper bags, paper boxes, and envelopes. Certain types of converted paper products (abrasive paper, carbon paper, and photosensitized and blueprint paper) are classified in other industries.

Group 27—Printing and publishing: Covers establishments primarily engaged in printing by one or more of such processes as letterpress, lithography, gravure, or screen; and establishments which perform services for the printing trade, such as bookbinding, typesetting, engraving, photo-engraving, and electrotyping. This group also includes establishments engaged in publishing newspapers, books, and periodicals, regardless of whether or not they do their own printing.

Item 80. Chemicals, petroleum, rubber and plastics products (28, 29, and 30).

Group 28—Chemicals and allied products: Covers establishments producing basic chemicals or manufacturing products by predominantly chemical processes. Such establishments manufacture three classes of products: (a) Basic chemicals such as acids, alkalies, salts, and organic chemicals; (b) chemical products to be used in further manufacture such as synthetic fibers, plastics materials, dry colors, and pigments; (c) finished chemical products to be used for ultimate consumption such as drugs, cosmetics, and soaps; or to be used as materials or supplies in other industries such as paints, fertilizers, and explosives.

Group 29—Petroleum refining and related industries: Covers establishments primarily engaged in petroleum refining, manufacturing paving and roofing materials, and compounding lubricating oils and greases from purchased materials.

Group 30—Rubber and miscellaneous plastics products: Covers establishments primarily engaged in manufacturing from natural, synthetic, or reclaimed rubber, gutta percha, balata, or gutta siak, rubber products such as tires, rubber footwear, mechanical rubber goods, heels and soles, flooring, and rubber sundries. This group also includes establishments rebuilding retreaded tires, molding primary plastics for the trade, and manufacturing miscellaneous finished plastics products.

Item 81. Lumber, wood products, and furniture (24 and 25).

Group 24—Lumber and wood products: Includes logging camps engaged in cutting timber and pulpwood; merchant sawmills, lath mills, shingle mills, cooperage stock mills, planing mills, and plywood mills and veneer mills engaged in producing lumber and wood basic materials; and establishments engaged in manufacturing finished articles made entirely or mainly of wood or wood substitutes.

Group 25—Furniture and fixtures: Covers establishments primarily engaged in manufacturing household, office, public building, and restaurant furniture; and office and store fixtures.

Item 82. Stone, clay, and glass products (32).

Group 32—Stone, clay, and glass products: Covers establishments primarily engaged in manufacturing flat glass and other glass products, cement, structural clay products, pottery, concrete and gypsum products, cut stone products, abrasive and asbestos products, etc., from materials taken principally from the earth in the form of stone, clay, and sand. When separate reports are not available for mines and quarries operated by manufacturing establishments classified in this major group, the mining activities are also classified in this group.

Item 83. Primary and intermediate metal products (33 and 34).

Group 33—Primary metal industries: Covers establishments primarily engaged in the smelting and refining of ferrous and nonferrous metals from ore, pig, or scrap; in the rolling, drawing, and alloying of ferrous and nonferrous metals; in the manufacture of castings, forgings, and other basic products of ferrous and nonferrous metals; and in the manufacture of nails, spikes, and insulated wire and cable. This group also includes the production of coke.

Group 34—Fabricated metal products: Covers establishments primarily engaged in fabricating ferrous and nonferrous metal products such as metal cans, tinware, hand tools, cutlery, general hardware, nonelectric heating apparatus, fabricated structural metal products, metal stampings, and a variety of metal and wire products not

elsewhere classified. Certain important segments of the metal fabricating industries, such as ordnance; machinery; transportation equipment; professional, scientific, and controlling instruments, watches and clocks; and jewelry and silverware, are classified in other major groups.

Item 84. Electrical and nonelectrical machinery (35 and 36).

Group 35. Machinery, except electrical: Covers establishments primarily engaged in manufacturing machinery and equipment, other than electrical equipment and transportation equipment. With the exception of electrical household appliances, machines powered by built-in or detachable motors ordinarily are included in this group. Portable tools, both electric and pneumatic powered, are also included here.

Group 36. Electrical machinery: Covers establishments primarily engaged in manufacturing machinery, apparatus, and supplies for the generation, storage, transmission, transformation, and utilization of electrical energy. The manufacture of household appliances is included in this group.

Item 85. Transportation and ordnance (37 and 19).

Group 37. Transportation equipment: Covers establishments engaged in manufacturing equipment for transportation of passengers and cargo by land, air, and water. Important products of establishments classified in this group include motor vehicles, aircraft, ships, boats, railroad equipment, and miscellaneous transportation equipment such as motorcycles, bicycles, and horse drawn vehicles.

Group 19. Ordnance and accessories: Covers establishments engaged in manufacturing artillery, small arms, and related equipment, ammunition; tanks and specialized tank parts, sighting and fire control equipment; and miscellaneous ordnance and accessories not elsewhere classified.

Item 86. Instruments and miscellaneous products (38 and 39).

Group 38. Instruments and related products: Covers establishments engaged in manufacturing mechanical measuring, engineering, laboratory, and scientific research instruments; optical instruments and lenses; surgical, medical, and dental instruments, equipment, and supplies; ophthalmic goods; photographic equipment and supplies; and watches and clocks. Excluded are establishments primarily engaged in manufacturing instruments for indicating, measuring, and recording electrical quantities and characteristics.

Group 39.—Miscellaneous manufacturing industries: Covers establishments primarily engaged in manufacturing products not classified in any other manufacturing major group. Industries in this group are in the following categories: Jewelry, silverware, and plated ware; musical instruments; toys, sporting and athletic goods; pens, pencils, and other office and artists' materials; buttons, costume novelties, miscellaneous notions; brooms and brushes; morticians' goods; and other miscellaneous manufacturing industries.

RETAIL TRADE, 1963

Items 87–100. General note.

Retail trade, as defined in the 1957 edition of the *Standard Industrial Classification Manual* as amended (see reference under Items 64–86) and as covered in the 1963 Census of Business, includes establishments primarily engaged in selling merchandise to personal, household, and farm users. Retail liquor stores operated by State and local governments are also included although they are not classified as retail trade in the *SIC Manual*. The figures shown here exclude data on administrative offices, warehouses, and other auxiliary units which service retail establishments of the same organization.

For the most part, establishments engaged in retail trade sell merchandise to the general public for personal or household consumption. Certain exceptions to this general rule are made necessary by trade practices. For example, retail lumber yards are included in retail trade despite the fact that a high proportion of their sales are made to contractors. Excluded from retail trade are places of business operated by institutions and open only to their own members or personnel, such as restaurants and bars operated by clubs, school cafeterias, and eating places operated by industrial and commercial enterprises for their own employees.

For purposes of coverage in the 1963 census, retail establishments were divided into two categories: Those with some paid employment during 1963, and those with no paid employment. Information for establishments having paid employees was obtained by a mail canvass. Information for establishments with no paid employment was derived from the 1963 Federal income tax returns. Only those establishments were included which reported a sales volume of $2,500 or more during 1963, or, having been in operation for less than the full year, reported sales which would have reached a total of $2,500 or more on an annual basis.

In all major respects, the 1958 and 1963 censuses were conducted under similar conditions and procedures. For a discussion of factors which affect strict comparability, see the source publication.

Items 87–88. Retail establishments.

Source: Bureau of the Census, *1963 Census of Business*, Vol. II, *Retail Trade—Area Statistics*.

An establishment is defined as a single physical location at which business is conducted. It is not necessarily identical with the "company" or "enterprise" which may consist of one or more establishments. In the Census of Business, a separate report was obtained for each location where business was conducted, including each location of multi-unit organizations.

Where two or more activities were carried on at a single location under a single ownership, all activities were generally grouped together as a single establishment; the entire establishment was then classified on the basis of its major activity, with all data for it included in that classification. However, in cases where distinct and sepa-

rate economic activities were conducted under the same ownership at a single location, and where conditions prescribed by the *SIC Manual* for recognizing the existence of more than one establishment were met, separate establishment reports were made for each of the different activities.

The number of establishments shown here is the number in business at the end of 1963. Establishments with payroll are those that had some paid employment during 1963.

See general note for Items 87–100.

Item 89. Sales of retail establishments.

Source: Same as Items 87–88.

Sales are defined to include merchandise sold plus receipts from repairs and from other services to customers, whether or not payment was received in 1963. They are net of deductions for refunds and allowances for merchandise returned by customers. Total sales exclude amounts other than those received from customers, such as income from investments, rental or real estate, etc. They include local and State sales taxes and Federal excise taxes collected by the store directly from customers and paid directly by the store to a local, State, or Federal tax agency. Gasoline, liquor, tobacco, and other excise taxes which are paid by the manufacturer or wholesaler and passed along to the retailer are also included.

The sales figures represent total sales and receipts of all establishments primarily engaged in retail trade, including receipts other than from the sale of merchandise at retail (e.g., service receipts, sales to industrial users, sales to other retailers, etc.). They exclude retail sales made by manufacturers, wholesalers, service establishments, and other businesses whose primary activity is other than retail trade.

Although the figures for number of establishments represent the number in business at the end of the year, the sales figures include sales of all establishments in business at any time during the year.

See general note for Items 87–100.

Items 90–92. Paid employees, payroll, and active proprietors.

Source: Same as Items 87–88.

Paid employees consist of all employees, including salaried officers and executives of corporations, who were on the payroll during the workweek ending nearest November 15, 1963.

Payroll comprises salaries, wages, commissions, bonuses, vacation allowances, and the value of payments in kind (such as free meals, lodgings, etc.) paid during the year to all employees. It includes amounts paid to officers and executives of corporations. It does not include compensation of proprietors or of partners of unincorporated businesses, nor amounts received by employees as tips, etc. Payroll is reported before deductions for social security, income tax, insurance dues, etc.

Active proprietors of unincorporated businesses comprise owners or partners who devoted the major portion of their time to the operation of the business.

See general note for Items 87–100.

Items 93–94. General merchandise stores.

Source: Same as Items 87–88.

This group includes stores usually selling a combination of two or more of the following kinds of merchandise: Dry goods, apparel and accessories, furniture and home furnishings, small wares, hardware, and food. Among the kinds of business included in this group are those commonly known as department stores, limited price variety stores (5-and-10, etc.), dry goods stores, sewing and needlework stores, and general stores.

See general note for Items 87–100 and text for Items 87–88 and 89.

Items 95–96. Food stores.

Source: Same as Items 87–88.

This group comprises establishments primarily selling food for home preparation and consumption. Among the kinds of business included in this group are grocery stores, meat markets, fish markets, fruit stores and vegetable markets, candy stores, dairy products stores, retail bakeries, and egg and poultry dealers.

See general note for Items 87–100 and text for Items 87–88 and 89.

Items 97–98. Automotive dealers.

Source: Same as Items 87–88.

This group includes establishments selling new automobiles or new and used automobiles and trucks, new automobile tires and other accessories, aircraft, boats, motorcycles, and household trailers. Establishments primarily selling trucks and motorized industrial equipment are classified as wholesale establishments and are excluded.

See general note for Items 87–100 and text for Items 87–88 and 89.

RETAIL TRADE, 1958

Items 99–100. Retail establishments and sales.

Source: Same as Items 87–88.

For definitions, see text for Items 87–88 and 89. See also general note for Items 87–100.

WHOLESALE TRADE, 1963

Items 101–106. General note.

Wholesale trade, as defined in the 1957 edition of the *Standard Industrial Classification Manual* as amended (see reference under Items 64–86) and as covered in the 1963 Census of Business, includes establishments primarily en-

gaged in selling merchandise to retailers; to institutional, industrial, commercial, and professional users; or to other wholesalers; or in negotiating as agents in buying merchandise for, or selling merchandise to, such persons or companies. Importers selling merchandise at wholesale in the U.S. market, exporters, and wholesale liquor establishments operated by State governments are included. Statistics shown here exclude data for administrative offices, warehouses, and other auxiliary units which service wholesale establishments of the same organization.

In all major respects, the 1958 and 1963 censuses were conducted under similar conditions and procedures. For a discussion of factors which affect strict comparability, see the source publication cited for Items 101–102.

Items 101–102. Wholesale establishments and sales.

Source: Bureau of the Census, *1963 Census of Business*, Vol. V, *Wholesale Trade—Area Statistics*.

See text for Items 87–88 and 89 for definitions of terms and classification procedures affecting establishments and sales.

Sales figures represent total sales and receipts of all establishments primarily engaged in wholesale trade, including receipts other than those from sales of merchandise at wholesale (e.g., retail sales, service receipts, etc.). They exclude sales made by manufacturers, retailers, service establishments, and other businesses whose primary activity is other than wholesale trade.

Although the figures for number of establishments represent the number in business at the end of the year, the sales figures include sales of all estabishments in business at any time during the year.

See general note for Items 101–106.

Item 103. Sales of merchant wholesalers.

Source: Same as Items 101–102.

These figures represent the total sales of establishments engaged in buying or selling merchandise on their own account, including farm product merchants who do not buy primarily from farmers. Included in this group are the following types of wholesalers: Wholesale merchants and distributors, importers, exporters, terminal grain elevators, wagon and truck distributors, and other limited-function wholesalers.

See general note for Items 101–106.

Items 104–105. Paid employees and payroll.

Source: Same as Items 101–102.

For definitions, see text for Items 90–92. See also general note for Items 101–106.

WHOLESALE TRADE, 1958

Item 106. Sales.

Source: Same as Items 101–102.

For definition, see text for Items 101–102. See also general note for Items 101–106.

SELECTED SERVICES, 1963

Items 107–113. General note.

Selected services as defined in the 1957 edition of the *Standard Industrial Classification Manual,* as amended (see reference under Items 64–86) are establishments engaged in rendering a wide variety of services to individuals and business establishments. The *SIC Manual* includes 14 major groups of services. Seven are included in the 1963 Census of Business essentially in their entirety as follows:

70. Hotels, roominghouses, camps, and other lodging places. The subordinate groups, "rooming and boarding houses" and "organization hotels and lodginghouses, on membership basis," are excluded.

72. Personal services.

73. Miscellaneous business services.

75. Automobile repair, automobile services, and garages.

76. Miscellaneous repair services.

78. Motion pictures.

79. Amusement and recreation services, except motion pictures. Symphony orchestras, ballet and opera companies, and similar services organized on a nonprofit basis are included. Establishments operated to provide recreational facilities for their own members and which are exempt from payment of Federal income tax under the provisions of Sec. 501 of the Internal Revenue Code are not included.

Excluded from coverage in the census are medical and other health services; legal services; education services; museums, art galleries, and botanical and zoological gardens; nonprofit membership organizations; private households; and miscellaneous services.

The figures shown here exclude data on administrative offices, warehouses, and other auxiliary units which service establishments of the same organization.

Both the 1958 and 1963 censuses excluded businesses with no paid employment which had a receipts volume of less than $1,000 in the census year.

In all major respects the 1958 and 1963 censuses were conducted under similar conditions and procedures. For a discussion of factors which affect strict comparability, see the source publication cited for Items 107–109.

Items 107–109. Selected services establishments and receipts.

Source: Bureau of the Census, *1963 Census of Business,* Vol. VII, *Selected Services—Area Statistics.*

See text for Items 87–88 and 89 for definitions of terms and classification procedures affecting establishments and receipts. See also general note for Items 107–113.

Receipts represent the total receipts from customers for services rendered and merchandise sold during 1963 whether or not payment was received during 1963. Total receipts exclude amounts other than those received from customers, such as income from investments, rental of real estate, etc. They include local and State sales taxes, and Federal excise taxes collected directly from customers and paid directly to a local, State, or Federal tax agency. Gaso-

line, liquor, tobacco, and other exise taxes paid by the manufacturer or wholesaler and passed along to the service establishment are also included. Receipts do not include receipts of manufacturers, wholesalers, retailers, and other businesses whose primary activity is other than service. They do, however, include receipts other than from services rendered (e.g., sales of merchandise to individuals or other businesses) by establishments primarily engaged in services.

Although the figures for number of establishments represent the number in business at the end of the year, the receipts figures include receipts of all establishments in business at any time during the year.

See general note for Items 107–113.

Items 110–111. Paid employees and payroll.

Source: Same as Items 107–109.

For definitions, see text for Items 90–92. See also general note for Items 107–113.

SELECTED SERVICES, 1958

Items 112–113. Establishments and receipts.

Source: Same as Items 107–109.

For definitions, see text for Items 107–109. See also general note for Items 107–113.

MINERAL INDUSTRIES, 1963

Items 114–120. General note.

The 1963 Census of Mineral Industries covers all establishments primarily engaged in mining as defined in the 1957 edition of the *Standard Industrial Classification Manual,* as amended (see reference under Items 64–68). The *SIC Manual* defines mining in the broad sense to include the extraction of minerals occurring naturally: Solids, such as coal and ores; liquids, such as crude petroleum; and gases, such as natural gas. In accordance with the definition, this census includes establishments primarily engaged in exploration and development of mineral properties and contract service establishments primarily engaged in work for others on mineral properties. In general, crushing, screening, washing, concentrating, and other preparation operations needed to render the mineral marketable are included, whether or not the preparation plants are located at the mines served. Smelting of metallic ores, petroleum refining, and production of cement, clay products, and concrete products are excluded.

Mining operations outside the scope of the census are secondary activities at manufacturing or other nonmanufacturing establishments, such as stone quarries at cement, lime, and dimension stone dressing plants; sand and gravel mines at ready-mixed concrete and concrete products plants; clay pits at structural clay products plants and pottery plants; and gypsum mines at gypsum products plants.

The production of minerals, particularly stone, sand, and gravel, by Federal, State, and local governments is excluded. Also excluded is some production of these items by highway contractors who do not maintain separate records for sand and gravel production. Included are mining establishments operated entirely to serve other establishments of the same company, such as coal mines serving only coke ovens operated by the same company, oil and gas wells serving only refineries or public utilities owned by the same company, and copper mines and mills where all of the ore is transferred to a company-owned smelter.

The Census of Mineral Industries is conducted on an establishment basis. That is, a company with operations at more than one location is required to submit a report for each location; also, companies engaged in distinctly different lines of activities at one location are required to submit separate reports if company records permit such a separation and if the activities are substantial in size.

A mineral establishment is generally defined as a single physical location where mineral operations are conducted; for example, a mine only, a mine and preparation plant, or a preparation plant only. For crude petroleum and natural gas operations, however, only one report was required for each State or district and, for contract service operations, only one report for the entire United States.

In the 1963 census, reports were required from all establishments employing one or more persons at any time during the year and from establishments without employees if value of shipments or expenditures amounted to $500 or more. The same size limitations were applied in the 1958 census.

Respondents were asked to file separate reports for any central administrative offices or auxiliary units which were at different location from the establishments served, or at the same location as one of these establishments, but not operated as an integral part of it and serving two or more establishments. The functions of employees in central administrative offices include general company policy determination, planning, and management. Auxiliaries are storage facilities, garages, repair shops, purchasing offices, sales promotion offices, and research laboratories serving the mines, plants, or central management of the company.

The employment and payroll at such offices and auxiliary units are included, but they are not counted in the figures for number of establishments.

State totals shown for establishments, employment, and payrolls are not necessarily the sum of the figures shown for counties. Discrepancies are due to the allocating procedures used to obtain county and State figures for companies operating oil and gas field properties and companies performing certain mining service operations.

Items 114–116. Mining establishments, employees, and payroll.

Source: Bureau of the Census, *1963 Census of Mineral Industries,* Series MIC63(2), to be subsequently presented in Vol. II, *Area Statistics.*

For definition of establishments, see general note for Items 114–120.

Employee figures comprise all full-time and part-time employees on the payrolls of mining establishments, including separate administrative offices and auxiliaries, who worked or received pay for any part of the pay period

which included the 12th and ended nearest the 15th of specified months (see below). All persons on paid sick leave, paid holidays, and paid vacations during these pay periods are counted. Also included are employees of mines paid on a per ton, car, or yard basis. Excluded are employees at the mine who were on the payroll of another employer (but employees of mining contractors are included in the reports for such contractors); employees at company stores, boardinghouses, bunkhouses, and recreational centers; and members of the Armed Forces and pensioners on the active rolls but not working during the period. Officers of corporations are included as employees; proprietors and partners of unincorporated firms are excluded.

Employee figures were reported separately for "production, development, and exploration workers" and for "all other employees." Figures for the former were for mid-month employment in March, May, August, and November; for the latter, only for mid-March employment. Thus, the figures for Item 115 are an average of the 4 monthly figures for the former group plus the March figure for the latter.

Payroll figures comprise the gross earnings paid in 1963 to all employees on the payroll of mining establishments, including separate administrative offices and auxiliaries. Included are salaries, wages, commissions, dismissal pay, bonuses, vacation and sick leave pay, and compensation in kind prior to such deductions as employees' social security contributions, withholding taxes, group insurance, union dues, and savings bonds. These figures include salaries of officers of corporations, but exclude payments to the proprietors or partners of unincorporated firms. Also excluded are payments to members of the Armed Forces and pensioners on the active payroll of mining establishments, royalty payments to unions, and costs of smithing, explosives, fuses, electric cap lamps, and mine supplies used in production and development work but charged to employees and deducted from their wages.

See general note for Items 114–120.

Item 117. Value of shipments and receipts.

Source: Same as Items 114–116.

Value of shipments is the net selling value, f.o.b., mine or plant, after discounts and allowances, and excluding freight charges.

Shipments include all products physically shipped from an establishment during 1963, including material withdrawn from stockpiles and products shipped on consignment, whether or not sold in 1963. Products transferred to other establishments of the same company or prepared on a custom basis are reported at approximate commercial value, not at the cost of production.

The figures include (a) the value of all primary products and of secondary products which are primary to other industries; (b) the receipts for contract work done for others (except custom milling): and (c) the value of products purchased and resold without further processing.

See general note for Items 114–120.

Item 118. Value added in mining.

Source: Same as Items 114–116.

Value added in mining is obtained by subtracting the cost of supplies, minerals received for preparation, purchases for resale, purchased fuels and electric energy, contract work, and purchased machinery from the value of shipments and receipts plus capital expenditures.

Value added avoids the duplication in the value of shipments figure which results when some establishments use the products of other establishments as supplies, energy sources, or materials. It also provides a measure of value added in mineral production and in development of mineral properties. For these reasons, it is considered to be the best value measure available for comparing the relative economic importance of mining among industries and geographic areas.

See general note for Items 114–120.

Item 119. Capital expenditures.

Source: Same as Items 114–116.

These figures represent expenditures made during 1963 for development and exploration of mineral properties, for new construction, and for purchases of machinery chargeable to fixed asset accounts of the mining establishments, and of a type for which depreciation, depletion, or office of minerals exploration accounts are ordinarily maintained. Capital expenditures include work done on contract as well as by the mine forces. Expenditures for machinery and equipment include purchases for replacement purposes as well as for additions to capacity. Expenditures for land, mineral rights, and maintenance and repair charged as current expense are excluded.

See general note for Items 114–120.

MINERAL INDUSTRIES, 1958

Item 120. Value of shipments and receipts.

Source: Bureau of the Census, *Census of Mineral Industries: 1958*, Vol. II, *Area Statistics*.

For definition, see text for Item 117. See also general note for Items 114–120.

AGRICULTURE, 1959

Item 121. All Farms.

Source: Bureau of the Census, *U.S. Census of Agriculture: 1959*, Vol. I, *Counties*.

Farms include all places of 10 or more acres with estimated annual sales of agricultural products amounting to at least $50. Places of less than 10 acres were counted as farms if the estimated sales of products during the census year amounted to at least $250. Places having less than the $50 or $250 minimum estimated sales were also counted as farms if they could normally be expected to produce agricultural products in sufficient quantity to meet the requirements of the definition. This additional qualification resulted in the inclusion as farms of some places engaged

in farming operations for the first time and places affected by crop failure or other unusual conditions.

Items 122–123. Land in farms.

Source: Same as Item 121.

Land area in farms consists primarily of "agricultural" land—that is, land used for crops and pasture or grazing. It also includes considerable areas of land not actually under cultivation nor used for pasture or grazing. For example, the entire acreage of woodland and wasteland owned or rented by farm operators is included as land in farms, unless it was being held for nonagricultural purposes or unless the acreage was unusually large. If a place had 1,000 or more acres of wasteland and of woodland not pastured, and if less than 10 percent of the total acreage in the place was used for agricultural purposes, the acreage of woodland not pastured and wasteland was reduced to equal the acreage used for agriculture.

Except for open range and grazing land used under Government permit, all grazing land was included as land in farms provided the place of which it was a part was a farm. Grazing land operated by grazing associations was reported in the name of the person chiefly responsible for conducting the business of the association. Land used rent-free was reported as land rented from others. All land in Indian reservations that was used for growing crops or grazing livestock was included. Land in Indian reservations that was not reported by individual Indians and that was not rented to non-Indians was reported in the name of the cooperative group that used the land. In some instances, an entire Indian reservation was reported as one farm.

Land in an individual farm may be located in two or more counties. In such a case, the entire farm was enumerated in only one county. If the farm operator lived on the farm, the farm was counted in the county in which the farm operator lived. If the farm operator did not live on the farm, the figures for the farm were included in the county in which the farm headquarters was located. If there was any question as to the location of the headquarters of the farm, the farm was counted in the county in which most of the land was located. As a result of this procedure, the figures for land in farms for some counties are larger than the figures for the entire land area of the counties.

The approximate total land area of States and counties is, in general, the same as that reported for all censuses beginning with 1940. Such differences as are shown reflect political changes in boundaries or actual changes in land area caused by changes in the number or size of reservoirs, lakes, streams, etc.

AGRICULTURE, 1964

Items 124–144. General note.

These data represent preliminary figures from the census of Agriculture taken in the fall of 1964.

Data on land in farms relate to the situation at the actual time of enumeration of each individual farm. Figures for value of crops sold relate generally to the crops harvested during the crop year, regardless of when they were sold, while data for sales of livestock and livestock products relate to the calendar year 1964. Since the enumeration was made before the end of 1964, special emphasis was placed on inclusion of estimates for crops yet to be sold and for livestock and livestock products expected to be sold in the period from the time of enumeration to the end of the calendar year.

Figures for some of the items shown here (value of land and buildings, persons in farm-operator households, and income from sources other than farm operated) are based on a sample of approximately one-fourth of all farms. The State totals for the sample items may not equal the sum of the county figures since State totals were obtained in a different series of tabulations. These and other slight discrepancies were not reconciled unless the differences were large enough to affect the usefulness of the data.

Item 124. All farms.

Source: Bureau of the Census, *1964 U.S. Census of Agriculture,* series AC 64-P1.

For definition, see text for Item 121. See also general note for Items 124-144.

Item 125. Farms operated by tenants.

Source: Same as Item 124.

Tenants rent from others or work on shares for others all the land they operate. Rental arrangements between owner and tenant may be on the basis of cash rent, sharing of crops, sharing of livestock or livestock products, furnishing of work power by the landlord, or any combination of such arrangements.

See general note for Items 124–144.

Items 126–127. Land in farms.

Source: Same as Item 124.

For definition, see text for Items 122–123. See also general note for Items 124–144.

Items 128–129. Value of land and buildings.

Source: Same as Item 124.

Figures are based on a sample of farms and represent farm operators' estimates of the market value of the land and the buildings on that land. Market value is defined as the price which a farm operator would expect to receive for the land and buildings if he were to sell them on the day of enumeration. Estimates of market value are based almost entirely on opinion. Since the majority of farms have not changed hands for many years and are not currently for sale, the operators are not likely to have any clear basis for estimating the value. Because of the extent of variation that is known to exist in real estate values, it is difficult to devise checking procedures that will identify inaccurate estimates.

See general note for Items 124–144.

Items 130–132. Commercial farms.

Source: Same as Item 124.

In general, all farms with a total value of products sold amounting to $2,500 or more are classified as commercial. Farms with sales of $50 to $2,499 are classified as commercial if the farm operator was under 65 years of age and he did not work off the farm 100 or more days during the year.

See general note for Items 124–144.

Item 133. Part-time farms.

Source: Same as Item 124.

Farms were defined as "part-time" if sales of farm products amounted to $50 to $2,499 and the operator was under 65 years of age and worked off the farm 100 days or more.

See general note for Items 124–144.

Items 134–136. Size of farms.

Source: Same as Item 124.

Farms were classified by size according to the total land area of each farm. In the analysis of size-of-farm statistics, consideration should be given to the definition of a farm. For purposes of the Census of Agriculture, farms are essentially operating units, not ownership tracts. If a landlord has croppers or other tenants, the land assigned each cropper or tenant is a separate farm even though the landlord may operate the entire holding as one farm in respect to supervision, equipment, rotation practices, purchase of supplies, or sale of products.

See general note for Items 124–144.

Items 137–140. Value of farm products sold.

Source: Same as Item 124.

These figures were obtained by addition of reported or estimated values for all products sold from the farm. The values for cattle and calves, hogs, sheep, some poultry products, vegetables, nursery and greenhouse products, standing timber, and miscellaneous forest products were obtained from the farm operator during the enumeration. For corn, sorghums, small grains, hay, some fruits, some of the forest products, chickens and chicken eggs, and milk and cream, the quantity sold was obtained during the enumeration and the value of sales was obtained by multiplying the quantity sold by State average prices. The average sales per farm was obtained by dividing the total sales by total farms.

All sales data relate to one year's farm operations. Crop sales are for crops harvested during the crop year, whether the crops were actually sold immediately after harvest or placed in storage for later sale. Sales of livestock and livestock products relate to the calendar year, regardless of when the livestock or products were raised or produced. All wool and mohair reported as shorn or clipped was considered as sold. The value of quantities sold was defined as the gross value, with no deductions for feed, seed, fertilizer, water, labor, or marketing costs. For some products, however, net values may have been reported.

For tenant-operated farms, the landlord's share of products was considered as sold, provided it was moved off the tenant farm. All crops, livestock, and poultry raised under a contract arrangement were considered as sold from the farm where they were raised. For institutional farms, all agricultural items produced on land operated by the institutions and consumed by the inmates were considered as sold.

See general note for Items 124–144.

Item 141. Persons in farm-operator households.

Source: Same as Item 124.

Figures are based on a sample of farms. Persons in farm-operator households include all persons living in the house of the operator at the time of the census, including hired employees.

See general note for Items 124–144.

Items 142–143. Income from sources other than farm operated.

Source: Same as Item 124.

Figures are based on a sample of farms. They cover income received by all members of farm-operator households from sources other than the farm operated. These sources include nonfarm business, professional practice, social security payments, pensions, veteran and welfare payments, rents from farm or nonfarm properties, interest, dividends, and wages and salaries from farm or nonfarm employment.

See general note for Items 124–144.

Item 144. Off-farm work.

Source: Same as Item 124.

Off-farm work covers nonfarm jobs, businesses, or professions, whether performed on the farm premises or elsewhere. Work on another farm for pay, but not exchange work, is also included.

See general note for Items 124–144.

Table 4

POPULATION AND AREA, 1960

Items 201–205. Land area and population.

Source: Same as Item 1.

For explanatory notes, see general note for Items 1–30 and text for Items 1–2, 3–4, and 5.

The 1950 Census of Population figures for cities apply to the area of each city in 1950. The percent change in population between 1950 and 1960, shown in Item 205, reflects the effect of any annexations or detachments which occurred to particular cities during that period. This qualification also applies to the percent of nonwhite and Negro population shown in Items 206, 207, and 208.

Items 206–207. Nonwhite population.

Source: Same as Item 1.

The nonwhite population consists of Negroes, Indians, Japanese, Chinese, Filipinos, Koreans, Asian Indians, Malayans, and other persons of nonwhite stock. Persons of Mexican birth or descent who are not definitely of Indian or other nonwhite descent are classified as white.

See general note for Items 1–30 and text for Items 201–205.

Item 208. Negro population.

Source: Same as Item 1.

For explanatory notes, see general note for Items 1–30 and text for Item 10.

Item 209. Foreign born.

Source: Same as Item 1.

The foreign-born population covers all persons residing in the United States who are not classified as native. (The native population includes all persons born in the United States, the Commonwealth of Puerto Rico, or a possession of the United States, and a small number of persons who, although they were born in a foreign country or at sea, have at least one native American parent.)

See general note for Items 1–30.

Item 210. Foreign stock.

Source: Same as Item 1.

For explanatory notes, see general note for Items 1–30 and text for Item 11.

Item 211. Leading country of origin of foreign stock.

Source: Same as Item 1.

For definition of foreign stock, see text for Item 11.

The figures represent the percent of the total foreign stock in each city accounted for by the leading country or area of origin. The abbreviations used for countries are as follows:

AS = Asia	NE = Netherlands
AU = Austria	NO = Norway
CA = Canada	OA = Other America
CZ = Czechoslovakia	OE = Other Europe
GE = Germany	P = Portugal
GR = Greece	PO = Poland
H = Hungary	S = Sweden
IR = Ireland	U = U.S.S.R.
IT = Italy	UK = United Kingdom
M = Mexico	Y = Yugoslavia

"Other America" covers all countries in the Western Hemisphere except Mexico and Canada.

"Other Europe" includes Denmark, Switzerland, France, Lithuania, Finland, Romania, and all other European countries not shown above.

See general note for Items 1–30.

Items 212–214. Population by age.

Source: Same as Item 1.

The median age is that age which divides the population into two equal parts, one-half of the cases falling below this age and one-half exceeding it.

Age classification is based on the age of the person in completed years as of April 1, 1960.

See general note for Items 1–30.

Item 215. Population per household.

Source: Same as Item 1.

A household includes all the persons who occupy a housing unit. (For definition, see text for Item 32.) The average population per household was computed by dividing the population in households by the number of households.

See general note for Items 1–30.

Item 216. Persons residing in same house in 1960 as in 1955.

Source: Same as Item 1.

This category includes all persons 5 years old and over who were reported as living in the same house on April 1, 1960, that they were living in 5 years earlier. Among the residents included are those who had never moved during the 5 years and those who had moved but who, by 1960, had returned to their 1955 residence.

See general note for Items 1–30.

VITAL STATISTICS

Items 217–218. Births and deaths, 1964.

Source: Same as Items 16–17.

For explanatory notes, see text for Items 16–17.

Item 219. Fertility ratio, 1960.

Source: Same as Item 1.

The "fertility ratio," as the term is used here, represents the number of children under 5 years old per 1,000 women 15 to 49 years old. It is a rough index of the natural growth tendencies of various areas and population groups. The ratio is a measure of effective fertility or of children surviving after most infant mortality has occurred.

EDUCATION, 1960

Items 220–224. School years completed by persons 25 years old and over, and school enrollment of persons 5 to 34 years old.

Source: Same as Item 1.

For explanatory notes, see text for Items 19–21 and 22.

Data relating to persons attending private schools cover persons 5 to 34 years old enrolled in elementary or secondary schools controlled and supported mainly by religious organizations or by private persons or organizations.

EMPLOYMENT, 1960

Items 225–228. Total employment and employment in manufacturing, retail and wholesale trade, and white collar occupations.

Source: Same as Item 1.

For explanatory notes, see general note for Items 23–25 and text for Items 23, 24, and 25.

INCOME, 1959, AND FAMILIES, 1960

Items 229–233. Aggregate income, families, and income of families.

Source: Same as Item 1.

For explanatory notes, see text for Items 26, 27, and 28–30.

HOUSING, 1960

Items 234–240. Housing units and selected housing characteristics.

Source: Same as Item 32.

For explanatory notes, see general note for Items 32–39, and text for Items 32, 33, 34, 35, 36–37, and 38.

Item 241. Index of home equipment.

Source: Same as Item 32.

For explanatory notes, see general note for Items 32–39 and text for Item 39.

The home equipment index (consisting of clothes washing machine, home food freezer, air conditioning, television set, telephone, and automobile) could be computed only for cities of 50,000 or more inhabitants. For smaller cities, home equipment data were compiled only for automobile and air conditioning.

HOUSING AUTHORIZATIONS, 1964

Items 242–244. Total, one-family, and 5-or-more-family housing units authorized by building permits.

Source: Bureau of the Census, *Construction Reports - Building Permits, Housing Authorized in Individual Permit-Issuing Places: 1964.*

These data represent the number of new privately-owned housing units authorized by building permits in approximately 12,000 individual localities. A housing unit is a single room or group of rooms intended for occupancy as separate living quarters by a family, by a group of unrelated persons living together, or by a person living alone. In accordance with this definition, each apartment unit in an apartment building is counted as one housing unit; for example, one building containing 50 apartments appears in these tables as 50 housing units.

ELECTRIC BILLS, 1964

Items 245–246. Typical monthly commercial and residential electric bills.

Source: Federal Power Commission, *Typical Electric Bills,* 1964.

Figures are as of January 1 and are based on rate schedules applicable to the area within corporate limits of the city shown. The commercial bill represents 12 kilowatt demand (the maximum quantity demanded at any one moment), 1500-kilowatt-hour monthly use, and covers service supplied to commercial and business establishments such as stores, offices, and restaurants where the service is used for lighting and incidental power service. The 250 kw.-hr. monthly residential bill covers basic residential services, excluding water heating, which, in many communities, is supplied by other sources of energy.

For a number of cities, two or more typical bills are shown in the source publication. Wherever known, the bill which represented the majority of customers is shown here. For commercial bills, it was not always possible to know exactly which bill represented the majority of customers. In such cases, the rate schedules were reviewed by the Federal Power Commission and, based on the information in these schedules, the bill which probably represented the majority of the customers was selected.

BANKING, 1964

Items 247–249. Demand deposits and bank debits to deposit accounts.

Source: Board of Governors of the Federal Reserve System, records.

The coverage of all commercial banks in the cities for which data are shown here is complete, or practically so. In some areas, banks or branches outside the specified city are included.

Deposits are as of December 31 and comprise demand deposit accounts of individuals, partnerships, and corporations, and of State and local governments. Bank debits to demand deposit accounts are calendar-year data and include: (a) Debits (e.g., withdrawals) or charges to demand deposit accounts of individuals, partnerships, and corporations, and of State and local governments; and (b) payments from trust funds on deposit in the banking department. Excluded are debits to United States Government deposit accounts, payments of certified and officers' checks, payments in settlement of clearinghouse balances, charges to expense and miscellaneous accounts, corrections, and similar charges, and debits to the accounts of other banks, that is, to interbank accounts.

EMPLOYMENT CHANGE, 1958-1963

Item 250. Employment in selected industries, percent increase.

Source: Bureau of the Census, *1963 Census of Manufactures,* series MC63(3); *U.S. Census of Business: 1958,* Vol. II, *Retail Trade—Area Statistics,* Vol. IV, *Wholesale Trade—Area Statistics,* and Vol. VI, *Selected Services—Area Statistics; 1963 Census of Business,* Vol. II, *Retail Trade—Area Statistics,* Vol. V, *Wholesale Trade—Area Statistics,* and Vol. VII, *Selected Services—Area Statistics.*

The industries covered are manufactures, retail trade, wholesale trade, and selected services. For scope of cover-

age of each of these major industry groups, see general notes for Items 64–86, 87–100, 101–106, and 107–113. For explanatory text concerning employment data for each group, see text for Items 64–65 and 90–92. Text for Items 90–92 applies also to employment in wholesale trade and in selected services.

The 1963 figures used as a basis for computing the percent increase were obtained by summing the figures for Items 253, 268, 293, and 302; 1958 figures were obtained in similar fashion from the service reports for items corresponding to those for 1963.

MANUFACTURES, 1963

Items 251–259. Establishments, employees, value added, and capital expenditures.

Source: Same as Items 64–65.

For explanatory notes, see general note for Items 64–86 and text for Items 64–65, 66–68, 69, 70, and 73–76.

MANUFACTURES, 1958

Item 260. Establishments with 20 or more employees.

Source: Bureau of the Census, *U.S. Census of Manufactures: 1958,* Vol. III, *Area Statistics.*

For definition of establishments, see text for Items 73–76.

Data exclude central administrative offices and auxiliaries and, therefore, are not strictly comparable with those given for 1963 in Item 252.

Items 261–262. All employees and value added by manufacture.

Source: Same as Items 64–65.

For explanatory notes, see text for Items 64–65 and 69.

RETAIL TRADE, 1963

Items 263–270. Establishments, sales, employees, payroll, and active proprietors.

Source: Same as Items 87–88.

For explanatory notes, see general note for Items 87–100 and text for Items 87–88, 89, and 90–92.

Items 271–288. Establishments and sales by kind of business.

Source: Same as Items 87–88.

For explanatory notes concerning establishments and sales, see text for Items 87–88, and 89.

The lumber, building materials, hardware, and farm equipment dealers group includes establishments primarily selling lumber; building materials; the basic lines of hardware, paint, wallpaper, glass, and electrical supplies; roofing materials; other supplies and equipment for home construction; and farm equipment. Establishments in this group sell to contractors as well as to the general public.

For explanatory notes for general merchandise stores, see text for Items 93–94; for food stores, Items 95–96; and for automotive dealers, Items 97–98.

Figures for gasoline service stations include establishments primarily selling gasoline and other automotive petroleum products and establishments called garages (provided they derived the larger part of their receipts from gasoline and oil sales).

Figures for apparel and accessory stores include establishments primarily engaged in selling clothing of all kinds and related articles for personal wear and adornment. Establishments which meet the criteria for department stores or general merchandise stores, even though most of their receipts are from the sale of apparel and apparel accessories, are excluded.

Figures for furniture, home furnishings, and equipment stores include establishments primarily selling merchandise used in furnishing the home, such as furniture, floor coverings, draperies, glass and chinaware, domestic stoves, refrigerators, and other household gas and electrical appliances, including radio and television sets. Also included are musical instrument stores and music and record shops.

Figures for eating and drinking places include establishments primarily selling prepared foods and drinks for consumption on their own premises. Examples of such places are restaurants, lunchrooms, cafeterias, refreshment stands, and drinking places (alcoholic beverages). Also included are caterers (who sell prepared foods for serving at a place designated by the customer), in-plant food contractors, and railroad dining-car facilities.

Figures for drugstores and proprietary stores include establishments which fill and sell prescriptions, and sell drugs, proprietary medicines, and other health and first-aid products. Usually these establishments sell a variety of other merchandise, such as cosmetics, toiletries, candy, tobacco products, magazines, toys, etc. Proprietary stores are establishments generally selling the same merchandise as drugstores, except that prescriptions are not filled and sold.

RETAIL TRADE, 1958

Items 289–290. Establishments and sales.

Source: Same as Items 87–88.

For explanatory notes, see general note for Items 87–100 and text for Items 87–88 and 89.

WHOLESALE TRADE, 1963

Items 291–296. Establishments, sales, employees, payroll, and merchant wholesalers.

Source: Same as Items 101–102.

For explanatory notes, see general note for Items 101–106 and text for Items 90–92, 101–102, and 103.

WHOLESALE TRADE, 1958

Item 297. Sales.

Source: Same as Items 101–102.

For explanatory notes, see text for Items 101–102.

TED SERVICES, 1963

298–303. Establishments, receipts, paid employees, yroll.

ce: Same as Items 107–109.

explanatory notes, see general note for Items 3 and text for Items 90–92 and 107–109.

)4. Active proprietors of unincorporated businesses.

ce: Same as Items 107–109.

e proprietors of unincorporated businesses com- vners or partners who devoted the major portion of ne to the operation of the business. These data are ed by crediting sole proprietorships with one pro- and partnerships with two proprietors if the estab- t was in business during the week of November

05–314. Establishments and receipts, by kind of

e: Same as Items 107–109.

es for hotels, motels, tourist courts, and camps in- stablishments engaged in providing lodging, or and meals, to the general public except (a) room- boarding houses, (b) hotels providing accommo- only for permanent residents, and (c) tourist Apartment or residential hotels which provide ac- lations for transients are included. Also included mercial establishments which provide camping and ace or camping facilities on a fee basis.

s for personal services include barber and beauty leaners and laundries, diaper services, funeral hoe and garment repair shops, turkish baths, re- alons, photographic studios, and other establish- rimarily engaged in providing services generally the care of a person or his apparel.

s for automobile repair and services and for ga- lude establishments primarily furnishing general ile repairs and establishments specializing in re- r rebuilding certain parts of an automobile, such diator, body, tires, glass (windows), brakes, etc. up also includes parking lots and structures, and ile and truck rental services. Similar facilities, nd operated by concerns for their own use and able to the general public, are treated as auxiliary nents of those concerns and are not included tomobile repair departments maintained by estab- engaged in the sale of new automobiles are cov- r retail trade.

for motion pictures include establishments pro- d distributing motion picture and still films and tapes for theatrical, nontheatrical, and television , and establishments engaged in services allied to ction and distribution of the films. Also included rs engaged in the exhibition of motion picture

for amusement and recreational services include ents primarily engaged in providing amusement, recreation, or entertainment. Symphony orchestras, ballet and opera companies, and similar services organized on a nonprofit basis are included. Establishments operated to provide recreational facilities for their own members and exempt from payment of Federal income tax are excluded. Gambling businesses operated in the State of Nevada are included; those in other States are excluded.

SELECTED SERVICES, 1958

Items 315–316. Establishments, and receipts.

Source: Same as Items 107–109.

For explanatory notes, see general note for Items 107–113 and text for Items 107–109.

HOSPITALS, 1964

Items 317–319. Hospitals, beds, admissions.

Source: The American Hospital Association, *Hospitals,* Guide Issue, Part II, Chicago, Ill., 1964.

These data are a summarization of the figures published for individual hospitals accepted for listing in the source publication. Data are for the year ending September 30, 1964, or for the fiscal year ending closest to that date.

The data cover hospitals of all types, but coverage varies. It is fairly complete for general hospitals, tuberculosis hospitals, mental hospitals, and Federal Government hospitals. Excluded almost entirely are institutions and services commonly referred to as convalescent and resting homes, nursing homes, maternity hospitals, infirmaries, old-age homes, sanatoriums, etc.

The number of beds shown includes beds, cribs, and pediatric bassinets normally available for inpatients; it excludes bassinets for newborn infants.

Admissions comprise the number of patients accepted for inpatient service during the year, but do not include births.

CITY GOVERNMENT FINANCES, 1964-65

Items 320–325. General revenue.

Source: For cities of 50,000 and over, Bureau of the Census, *City Government Finances in 1964–65*; for cities of 25,000 to 50,000, records.

For explanatory notes relating to total and intergovernmental general revenue, total taxes, and property taxes, see text for Items 46–49.

Sales and gross receipts taxes are taxes (including licenses other than those at nominal rates) based on the volume or value of transfers of goods or services, or on gross receipts therefrom, and related taxes based on use, storage, production, importation, or consumption of goods.

Charges and miscellaneous general revenue includes current charges, special assessments, and all other general revenue except taxes and intergovernmental revenue.

Items 326–337. General expenditure.

Source: Same as Items 320–325.

Total general expenditure includes all city expenditures except those for utilities, liquor stores, and employee-retirement or other insurance trusts. The total excluding capital outlay covers all general expenditure except direct expenditure for contract or force account construction of buildings, roads, and other improvements; purchase of equipment, land, and existing structures; and additions, replacements, and major alterations to fixed works and structures.

For explanatory notes relating to expenditure for education, highways, public welfare, health and hospitals, and police protection, see text for Items 50–56.

Fire expenditure covers cost of city firefighting organizations and auxiliary services, inspection for fire hazards, and other fire prevention activities.

Sewerage expenditures include those for sewers and sewage disposal facilities and services, and payments to other local governments for such purposes.

Expenditures for sanitation other than sewerage cover street cleaning, and collection and disposal of garbage and other waste.

Expenditures for parks and recreation include cultural-scientific activities, such as museums and art galleries; organized recreation, including playgrounds and play fields, swimming pools and bathing beaches; municipal parks; and special facilities for recreation, such as auditoriums, stadiums, auto camps, recreation piers, and boat harbors.

Interest on general debt includes all expenditure for use of borrowed money.

Item 338. Debt outstanding.

Source: Same as Items 320–325.

Debt outstanding is defined as all debt obligations remaining unpaid at the close of the city's fiscal year.

CITY GOVERNMENT EMPLOYMENT, OCTOBER 1965

Items 339–340. Full-time employees and payroll.

Source: Bureau of the Census, *City Employment in 1965.*

Figures relate only to municipal corporations and their dependent agencies. They do not include other local governments overlying city areas, as, for example, separate school districts which administer the public schools within most municipal areas. They do, however, include public schools for those cities which administer the public school system.

Individual municipalities differ widely in the range of their responsibilities. Important functions such as airports; port or terminal facilities; correction, health, hospital and welfare services; and operation of public utilities may or may not be handled by the municipal government. These "variable" functions have an important effect on the employment figures reported for various cities.

CLIMATE

Items 341–348. General note.

Many of the cities for which data are shown here, especially those which adjoin large metropolitan centers, do not have official weather stations. For most of these cities, observations from nearby stations having approximately the same climatic conditions have been substituted. (See Appendix C for the complete list of these cities and the substituted stations.) No temperature data are given for some cities as there were no nearby representative stations with a sufficient period of record to provide mean values.

Items 341–344. Mean temperature for January and July, and record temperature.

Source: Weather Bureau, *Decennial Census of United States Climate—Monthly Normals of Temperature, Precipitation, and Heating Degree Days (1931–1960),* 1962; *Climatological Data,* monthly and annual; and *Local Climatological Data,* monthly and annual.

For most stations mean temperature is based on the period 1931–1960. The means are adjusted to represent observations taken at the present standard location.

Record temperature figures represent the highest and lowest temperatures ever recorded. While these figures are related to the length of record (which is not strictly uniform for all cities shown), they are considered adequate for usual comparisons. It should be borne in mind, however, that they indicate extreme conditions and that temperatures approaching these figures occur infrequently.

See general note for Items 341–348.

Items 345–348. Mean annual precipitation, possible sunshine, wind velocity, and degree days.

Source: Same as for Items 341–344.

Mean annual precipitation figures are derived in the same manner as the mean temperature figures (see text for Items 341–344).

Mean annual percent figures of possible sunshine are for stations having automatic sunshine recorders for a considerable period of time and for which sunshine records have been summarized. These percents represent the relationship between the number of hours of sunshine as recorded by instrument and the number of hours between sunrise and sunset for each day during the year.

Mean annual hourly wind speed figures were taken from records at stations equipped with wind instruments. The means represent averages of the wind speed in miles per hour for the period of record.

Mean annual degree days, 65° base, is the mean of the annual sums of the differences between 65° and the daily mean temperatures below 65°. Temperatures of 65° or higher do not affect the degree day total. The data were compiled from the total number of degree days each month for the period 1931–1960. The degree day figure is based on the assumption that the amount of fuel or heat used per day to heat buildings to a temperature of approximately 70° is proportional to the number of degrees that the outside temperature falls below 65°.

See general note for Items 341–348.

[1]Includes non-settled cases. [2]Data are estimated. [3]Includes general assistance cases receiving vendor medical payments. [4]Marriage licenses.
[5]Includes 943 cases from State office. [6]Includes cases for aid to families with dependent children. [7]State funds only for general assistance.
[8]Includes estimated general assistance cases.

Table 1.—REGIONS, DIVISIONS, AND STATES

[Minus (—) denotes decrease. For items 37 and 38, plus (+) or minus (—) after number indicates median above or below that number]

Region, division, and State	Housing units, 1960								Bank deposits, 1964				Savings capital of savings and loan associations, 1964	
	Total	In one-unit structures	Sound, with all plumbing facilities	Occupied units				Index of home equipment [1]	Total	Change, 1960–1964	Time	Demand	Savings capital	Change, 1960–1964
				Total	Owner occupied		Median gross monthly rent (renter occupied)

- Represents zero. X Not applicable. Z Less than 0.5 persons per square mile.

[1] Adjusted to allow for annexation of part of Arapahoe County to Denver County between 1950 and 1960.

[2] Includes the following SMSA's: Norwalk (139) and Stamford (192), and part of Bridgeport (028).

[3] Includes the following SMSA's: New Britain (131) and part of Hartford (081).

[4] Includes part of Waterbury SMSA (212).

[5] Includes part of Hartford SMSA (081).

[6] Includes the following SMSA's: Meriden (119) and New Haven (132), and parts of Bridgeport (028) and Waterbury (212).

[7] Includes New London-Groton-Norwich SMSA (133).

[8] Includes parts of the following SMSA's: Hartford (081) and Springfield-Chicopee-Holyoke (191).

[1]Includes 296 marriages not distributed by county.

Table 2.—COUNTIES

[Minus (—) denotes decrease. For items 37 and 38, plus (+) or minus (—) after number indicates median above or below that number]

County	Housing units, 1960								Bank deposits, 1964				Savings capital of savings and loan associations, 1964	
	Total	In one-unit structures	Sound, with all plumbing facilities	Occupied units				Index of home equipment [1]	Total	Change, 1960–1964	Time	Demand	Savings capital	Change, 1960–1964
				Total	Owner occupied		Median gross monthly rent (renter occupied)							
					Total	Median value

– Represents zero. X Not applicable.

[1] Obtained by adding the percents of occupied units with clothes washing machine, home freezer, air conditioning, TV set, telephone, and automobile. Maximum total possible = 600.

[2] Figure shown for New York County is for New York City (Bronx, Kings, New York, Queens, and Richmond Counties).

[3] Evidence indicates that owner-occupied units in New York County are predominantly in "cooperative" apartments. Since it was not feasible to process the data to exclude these units, median is not shown.

- Represents zero.
[1] Includes cases for aid to families with dependent children, not shown separately.

Table 2.—COUNTIES

[Minus (—) denotes decrease. For items 37 and 38, plus (+) or minus (—) after number indicates median above or below that number]

County	Housing units, 1960								Bank deposits, 1964				Savings capital of savings and loan associations, 1964	
	Total	In one-unit structures	Sound, with all plumbing facilities	Occupied units				Index of home equipment [1]	Total	Change, 1960–1964	Time	Demand	Savings capital	Change, 1960–1964
				Total	Owner occupied		Median gross monthly rent (renter occupied)
